

APPENDIX B

Project Construction Emissions

Lost Hills Construction Emissions for 11 Steam Generators

Description

The project proponent is CHEVRON U.S.A. INC. (Chevron). The project involves the construction of eleven steam generators and supporting water treatment facilities. In order to provide conservative emissions estimates, construction emissions are based on a 10 month construction period in 2011. (Actual construction will occur after 2011.) The location of the project is in Section 29, Township 26S, Range 21E. The nearest town is Lost Hills approximately 3 miles to the southeast. The construction activities include site preparation, installation of eleven steam generators, water treatment equipment, piping and electrical systems.

Analysis

The Sacramento Metropolitan Air Quality Management District Road Construction Emissions Model was used to determine the project emissions.

<http://airquality.org/ceqa/RoadConstructionModelVer6.3-2.xls>

The type of equipment used and hours of use for construction equipment was developed from Chevron's engineering estimates.

The horsepower defaults in the model were used except where specific equipment for the project was significantly different than the defaults.

The number of commute trips used the default method in the model for construction equipment and project specific man hours for other workers.

Annual Emissions Full Scale Water Treatment Plant in 2011

Component	Emissions (tons/year)			
	NOx	PM ₁₀	VOC	CO
Commute	0.3	0.03	0.2	3.5
Fugitive Dust	-	0.9	-	-
