I. PROPOSAL

Sunsweet Dryers is proposing that an initial Title V permit be issued for its fruit cleaning, drying, sizing, and storage facility at 28390 Ave 12 in Madera County, CA. The purpose of this evaluation is to identify all applicable requirements, determine if the facility will comply with those applicable requirements, and to provide the legal and factual basis for proposed permit conditions.

II. FACILITY LOCATION

Sunsweet Dryers is located at 28390 Ave 12 in Madera County, CA.

III. EQUIPMENT LISTING

A detailed facility printout listing all permitted equipment at the facility is shown in Attachment A.

A summary of the exempt equipment categories which describe the insignificant activities or equipment at the facility not requiring a permit is shown in Attachment B. This equipment is not exempt from facility-wide requirements.

IV. GENERAL PERMIT TEMPLATE USAGE

The applicant is requesting to use the following model general permit templates:

- a. SJV-UM-0-3, Facility-wide Umbrella General Permit Template

The applicant has requested to utilize template #SJV-UM-0-3, Facility-wide Umbrella General Permit Template for unit C-1694-0-1. Based on the information submitted on the Template Qualification Form (Attachment C), the applicant qualifies for the use of this template.

V. SCOPE OF EPA AND PUBLIC REVIEW

Certain segments of the proposed Operating Permit are based on model general permit templates that have been previously subject to EPA and public review. The terms and conditions from the model general permit templates are included in the proposed permit and are not subject to further EPA and public review.

For permit applications utilizing model general permit templates, public and agency comments on the District's proposed actions are limited to the applicant's eligibility for model general permit template, applicable requirements not covered by the model general permit template, and the applicable procedural requirements for issuance of Title V Operating Permits.

The following permit conditions, including their underlying applicable requirements, originate from model general permit templates and are not subject to further EPA or public review.

Conditions 1 through 40 of the requirements for permit unit C-1694-0-1.

IX. COMPLIANCE

A. Requirements Addressed by Model General Permit Templates

1. Facility Wide Requirements

The applicant is proposing to use a general permit template to address federally applicable facility-wide requirements. Section IV of template SJV-UM-0-3 includes a demonstration of compliance for all applicable requirements. Template conditions have been added to the facility wide requirements as condition numbers 1 through 40 to assure compliance with these requirements.

B. Requirements Not Addressed by Model General Permit Templates

2. District Rule 2520, Federally Mandated Operating Permits

There are no federally applicable Greenhouse Gas (GHG) requirements for this source. It should be noted that the Mandatory Greenhouse Gas Reporting rule (40CFR Part 98) is not included in the definition of an applicable requirement within Title V (per 40CFR 71.2). Therefore, there will be no further discussion of GHG in this evaluation.

3. District Rule 4201, Particulate Matter Concentration

The purpose of this rule is to protect the ambient air quality by establishing a particulate matter emission standard. Section 3.1 requires emissions to be at or below 0.1 grains of particulate matter per dry standard cubic foot of exhaust gas.

Natural Gas-Fired Dehydrators:

The following analysis demonstrates that PM emissions from a dehydrator fired exclusively on natural gas will not exceed 0.1 gr/dscf:

F-Factor for NG: 8,578 dscf/MMBtu at 60 °F (40 CFR 60)

PM10 Emission Factor: 0.0048 lb-PM10/MMBtu (Current Permits)

Percentage of PM as PM10 in Exhaust: 100%

Exhaust Oxygen (O₂) Concentration: 3%

$$\text{Excess Air Correction to F Factor} = \frac{20.9}{(20.9 - 3)} = 1.17$$

$$GL = \left(2 \times \frac{0.0048 \text{ lb-PM}}{\text{MMBtu}} \times \frac{7,000 \text{ grain}}{\text{lb-PM}} \right) / \left(\frac{8,578 \text{ ft}^3}{\text{MMBtu}} \times 1.17 \right)$$

$$GL = 0.007 \text{ grain/dscf} < 0.1 \text{ grain/dscf}$$

**a) C-1694-1-3: 87.5 MMBTU/HR DEHYDRATING TUNNELS (#1-50)
 SERVED BY 25 BURNERS RATED AT 3.5 MMBTU/HR EACH**

- Condition 4 of the requirements for proposed permit -1-3 ensures compliance with these requirements.

**b) C-1694-2-2: 63.0 MMBTU/HR DEHYDRATING TUNNELS (#51-86)

SERVED BY 18 BURNERS RATED AT 3.5 MMBTU/HR EACH**

- Condition 4 of the requirements for proposed permit -3-2 ensures compliance with these requirements.

Prune Sizing Operation:

The following analysis demonstrates that PM emissions from prune sizing operations will not exceed 0.1 gr/dscf:

$$\text{PM Conc. (gr/scf)} = \frac{(\text{PM emission rate}) \times (7,000 \text{ gr/lb})}{(\text{Air flow rate}) \times (60 \text{ min/hr}) \times (24 \text{ hr/day})}$$

PM₁₀ emission rate = 36 lb/day. Assuming 100% of PM is PM₁₀
Exhaust Gas Flow = 1,750 cfm

$$\text{PM Conc. (gr/scf)} = \frac{[(36 \text{ lb/day}) \times (7,000 \text{ gr/lb})]}{[(1,750 \text{ ft}^3/\text{min}) \times (60 \text{ min/hr}) \times (24 \text{ hr/day})]}$$

$$\text{PM Conc.} = 0.1 \text{ gr/scf} = < 0.1 \text{ gr/scf}$$

**d) C-1694-5-1: 10 HP DRIED PRUNE SIZING OPERATION SERVED BY
A PITTSBURG-DES MOINES CORP 100" DIAMETER 1D-1D
CYCLONE WITH A WESTERN BLOWER MOTOR (1750 CFM)**

- Condition 1 of the requirements for proposed permit -5-1 ensures compliance with these requirements.

Fruit Cleaning Operations:

The following analysis demonstrates that PM emissions from the fruit cleaning operations will not exceed 0.1 gr/dscf:

$$\text{PM Conc. (gr/scf)} = \frac{(\text{PM emission rate}) \times (7,000 \text{ gr/lb})}{(\text{Air flow rate}) \times (60 \text{ min/hr}) \times (24 \text{ hr/day})}$$

PM₁₀ emission rate = 2.0 lb/day. Assuming 100% of PM is PM₁₀
Exhaust Gas Flow = 5,000 cfm (project C-1040151)

$$\text{PM Conc. (gr/scf)} = [(2.0 \text{ lb/day}) * (7,000 \text{ gr/lb})] \div [(5,000 \text{ ft}^3/\text{min}) * (60 \text{ min/hr}) * (24 \text{ hr/day})]$$

$$\text{PM Conc.} = 0.002 \text{ gr/scf} < 0.1 \text{ gr/scf}$$

e) C-1694-8-1: FRUIT CLEANING OPERATION #1 EQUIPPED WITH AN ASPIRATOR SERVED BY A LMC WEST MODEL LHE42 HIGH EFFICIENCY CYCLONE

- Condition 3 of the requirements for proposed permit -8-1 ensures compliance with these requirements.

f) C-1694-9-1: FRUIT CLEANING OPERATION #2 EQUIPPED WITH AN ASPIRATOR SERVED BY A LMC WEST MODEL LHE42 HIGH EFFICIENCY CYCLONE

- Condition 3 of the requirements for proposed permit -10-1 ensures compliance with these requirements.

4. District Rule 4301, Fuel Burning Equipment

Rule 4301 limits the emissions of air contaminants from fuel burning equipment. The rule limits the concentration of combustion contaminants and specifies maximum emission rates for sulfur dioxide, nitrogen oxide and combustion contaminant emissions.

Section 5.1 limits PM emissions to 0.1 grain per cubic foot of gas calculated to 12% carbon dioxide at standard conditions.

Section 5.2.2 requires NO_x emissions be limited to 140 lb/hr (calculated as NO₂).

Section 5.2.3 limits combustion contaminants, particulate matter discharged into the atmosphere from the burning of any kind of material containing carbon in a free or combined state, derived from the fuel to ten (10) pounds per hour.

Natural Gas-Fired Dehydrators:

District Rule 4301 Limits			
Pollutant	NO₂	Total PM	SO₂
C-1694-1-3 (lb/hr)	1.4	0.4	1.1
C-1694-2-2 (lb/hr)	1.0	0.3	0.8
C-1694-3-2 (lb/hr)	1.0	0.3	0.8
Rule Limit (lb/hr)	140	10	200

As demonstrated in the table above, all the dehydrators at this facility are in compliance with this District Rule.

 SERVED BY 18 BURNERS RATED AT 3.5 MMBTU/HR EACH
 - Condition 2 of the requirements for proposed permit -3-2 ensures compliance with these requirements.

5. District Rule 4309 – Dryers, Dehydrators, and Ovens

The purpose of this rule is to limit emissions of oxides of nitrogen (NOx) and carbon monoxide (CO) from dryers, dehydrators, and ovens. This rule applies to any dryer, dehydrator, or oven that is fired on gaseous fuel, liquid fuel, or is fired on gaseous and liquid fuel sequentially, and the total rated heat input for the unit is 5.0 million British thermal units per hour (5.0 MMBtu/hr) or greater. Since the dehydrator at this facility have a heat input rating greater than 5.0 MMBtu, they are subject to the requirements of this rule.

Section 3.9 defines as dehydrator as a device that drives free water from products like fruits, vegetables, and nuts, at an accelerated rate without damage to the product. According to this definition, the unit in this project is classified as a dehydrator.

Section 5.1 states that dehydrators shall be fired exclusively on PUC quality natural gas, except during periods of PUC quality natural gas curtailment. The following condition will be added to the permit to assure compliance with the requirements of this section.

Section 5.1.1 states that all dehydrators shall be operated and maintained according to manufacturer's specifications or APCO-approved alternative procedures. The following condition will be added to the permit to assure compliance with the requirements of this section.

Section 5.1.2 states that operation and maintenance records and manufacturer's specifications/APCO-approved alternative procedures shall be maintained in accordance with Section 6.1.3. Conditions demonstrating compliance with this section will be discussed in the Section 6.1.3 compliance discussion below.

Section 5.4.2 states that operators of a dehydrator shall maintain records that demonstrate, to the satisfaction of the APCO, ARB, and US EPA that the dehydrator is:

- Fired exclusively on PUC quality natural gas, except during PUC quality natural gas curtailment, and
- Properly operated and maintained according to manufacturer's specifications or APCO-approved alternative procedures.

Conditions demonstrating compliance with this section will be discussed in the Section 6.1.3 compliance discussion below.

Section 6.1.3 states that the operator of a dehydrator shall maintain the following records:

- Records that show the dehydrator is fired exclusively on PUC quality natural gas, except during PUC quality natural gas curtailment.

Section 6.1.3.3 states that a copy of the manufacturer's operation specifications and maintenance instruction manual or APCO-approved alternative procedures shall be maintained on-site during normal business hours. The following condition will be added to the permit to assure compliance with the requirements of this section.

Section 7.4 states that an operator of a dehydrator subject to this rule shall be in compliance with this rule by July 1, 2006. Since the dehydrators in at this facility meet the all the requirements of District Rule 4309, these dehydrators are in compliance with the requirements of this section.

6. 40 CFR Part 64, CAM

40 CFR Part 64 requires Compliance Assurance Monitoring (CAM) for units that meet the following three criteria:

- 1) the unit must have an emission limit for the pollutant;
- 2) the unit must have add-on controls for the pollutant; these are devices such as flue gas recirculation (FGR), baghouses, and catalytic oxidizers; and
- 3) the unit must have a pre-control potential to emit of greater than the major source thresholds.

Pollutant	Major Source Threshold (lb/year)
VOC	20,000
NO _x	20,000
CO	200,000
PM ₁₀	140,000
SO _x	140,000

a) C-1694-1-3: 87.5 MMBTU/HR DEHYDRATING TUNNELS (#1-50) SERVED BY 25 BURNERS RATED AT 3.5 MMBTU/HR EACH

- 1) This unit contains emission limits for NO_x, SO_x, PM₁₀, CO, and VOC.
- 2) The emissions from this unit are not controlled by any type of control device; therefore it is not subject to CAM.

b) C-1694-2-2: 63.0 MMBTU/HR DEHYDRATING TUNNELS (#51-86) SERVED BY 18 BURNERS RATED AT 3.5 MMBTU/HR EACH

- 1) This unit contains emission limits for NO_x, SO_x, PM₁₀, CO, and VOC.
- 2) The emissions from this unit are not controlled by any type of control device; therefore it is not subject to CAM.

c) C-1694-3-2: 63.0 MMBTU/HR DEHYDRATING TUNNELS (#87-122) SERVED BY 18 BURNERS RATED AT 3.5 MMBTU/HR EACH

Pre-control Annual PE:

$$\begin{aligned} PE &= EF \text{ (gr/dscf)} \times CFM \text{ (dscf/min)} \times (1 \text{ lb}/7000 \text{ gr}) \times 525,600 \\ &\quad \text{min/year} \\ &= (0.1 \text{ lb-PM}_{10}/\text{ton}) \times (1,750 \text{ dsf/min}) \times (1 \text{ lb}/7000 \text{ gr}) \times (525,600 \\ &\quad \text{min/year}) \\ &= \mathbf{13,140 \text{ lb-PM}_{10}/\text{year}} \end{aligned}$$

$$\begin{aligned} \text{Pre-control PE} &= PE \div (1 - CE) \\ &= (13,140 \text{ lb-PM}_{10}/\text{year}) \div (1 - 0.5) \\ &= \mathbf{26,280 \text{ lb-PM}_{10}/\text{year}} \end{aligned}$$

Since 1,460 lb-PM₁₀/yr < 140,000 lb-PM₁₀/yr (Major Source threshold for PM₁₀), this unit is not subject to CAM for PM₁₀ emissions.

X. PERMIT SHIELD

A permit shield legally protects a facility from enforcement of the shielded regulations when a source is in compliance with the terms and conditions of the Title V permit. Compliance with the terms and conditions of the Operating Permit is considered compliance with all applicable requirements upon which those conditions are based, including those that have been subsumed.

A. Requirements Addressed by Model General Permit Templates

By using the model general permit template listed in Section IV of this evaluation, the applicant has requested that a permit shield be issued for requirements addressed in the template. The basis for each permit shield is discussed in the Permit Shield section of each template.

Public Comments and District Responses

Public Comments / District Response

The comment (from EPA) regarding the proposed renewed Title V Operating Permits for Sunsweet Dryers (District facility C-1694) is encapsulated below followed by the District's response.

EPA Comments – Email from Laura Yannayon, received on May 31, 2012

EPA Comment #1:

This facility operates various types of emission units that emit particulate matter (PM). While the facility-wide permit (C-1694-0-1) Condition #22 contains a 20% opacity limit, EPA could not find any requirements in the permit to monitor the PM emitting sources, at least periodically, to verify compliance with this standard.

Please revise the permit as needed, either in the facility wide portion or in each emission unit permit that requires it, to include at least an annual determination of compliance by ensuring the VE emissions are monitored for compliance with the 20% opacity limit and records are maintained of this monitoring.

Districts Response:

The following conditions will be added to permits C-1694-1-3, -2-2, -3-2, -5-1, -6-2, -8-1, -9-1, and -10-1 to assure the facility is in compliance with their VE requirements:

- *Visible emissions from the source operation shall be evaluated using EPA Method 22 once per calendar year. If visible emissions are observed, corrective action shall be taken to eliminate visible emissions. If visible emissions cannot be corrected within 24 hours, a visible emissions test using EPA Method 9 shall be conducted. [District Rule 2520] Federally Enforceable Through Title V Permit*
- *Annual records of visible emissions monitoring results shall be maintained and retained on the premises for a period of at least 5 years and made available for District inspection upon request. [District Rule 2520] Federally Enforceable Through Title V Permit*
