Re: Notice of Preliminary Decision – Emission Reduction Credits
Facility Number: C-409
Project Number: C-1172943

Dear Mr. Sorenson:

Enclosed for your review and comment is the District's analysis of Ponderosa Paint Co's application for Emission Reduction Credits (ERCs) resulting from the shutdown of the salted and roasted nut and seeds processing operation, at 5626 E Shields Ave, Fresno. The quantity of ERCs proposed for banking is 1,850 lb-NOx/yr, 20 lb-SOx/yr, 4,162 lb-PM10/yr, 1,348 lb-CO/yr, and 170 lb-VOC/yr.

The notice of preliminary decision for this project will be published approximately three days from the date of this letter. After addressing all comments made during the 30-day public notice comment period, the District intends to issue the ERCs. Please submit your written comments on this project within the 30-day public comment period, as specified in the enclosed public notice.

Thank you for your cooperation in this matter. If you have any questions regarding this matter, please contact Mr. Jesse A. Garcia of Permit Services at (559) 230-5918.

Sincerely,

A handwritten signature in blue ink that reads "P. Arnaud Marjollet".

Arnaud Marjollet
Director of Permit Services

ERC Banking Application Review

Shutdown of Salted and Roasted Nuts and Seeds Operation

Processing Engineer: Jesse A. Garcia
Lead Engineer: Joven Refuerzo
Date: October 1, 2018

Facility Name: Ponderosa Paint Co
Mailing Address: 3663 N Clovis Ave
Fresno, CA 93727

Contact Person: Eric Sorensen
Telephone: (559) 291-0664
Email: eas@ponderosapaintco.com

Application Received: October 9, 2017
Deemed Complete: December 29, 2017

Project Number: C-1172943
ERC Certification number: C-1463-1, -2, -3, -4, -5

I. Proposal

Ponderosa Paint Co has submitted an application for Emission Reduction Credits (ERCs) banking for the shutdown of a salted and roasted nuts and seeds manufacturing plant (C-409) that was previously owned and operated by ConAgra Foods. ConAgra Foods sold the building and all rights to the ERCs from their operation. All permits were cancelled on November 3, 2017. A copy of the surrendered Permits to Operate (PTOs) are included in Appendix I.

The quantity of bankable emission reductions for the shutdown of the salted and roasted nuts and seeds manufacturing operation is summarized in the table below:

Pollutant	1st Quarter (lb)	2nd Quarter (lb)	3rd Quarter (lb)	4th Quarter (lb)	Total (lb)
NOx	502	502	423	423	1,850
SOx	5	5	5	5	20
PM ₁₀	888	888	1,193	1,193	4,162
PM _{2.5} ¹	517	517	705	705	2,444
CO	362	362	312	312	1,348
VOC	45	45	40	40	170

¹ Since PAS requires the values to be entered in percentage, calculating PM2.5 percentage as PM2.5/PM10 yields the following per quarter: 1st quarter = 58.2%, 2nd quarter = 58.2%, 3rd quarter = 59.1%, 4th quarter = 59.1%.

II. Applicable Rules

Rule 2201 New and Modified Stationary Source Review Rule (02/18/16)
Rule 2301 Emission Reduction Credit Banking (01/19/12)

III. Location of Reduction:

The emissions units were located at 5626 E Shields Ave in Fresno, CA.

IV. Method of Generating Reductions:

The plant production ceased and all permits were cancelled on November 3, 2017.

Equipment Description:

Copies of all permit units for which the facility requested emissions reductions are attached in Appendix I.

C-409-8-1: RAW SEED CLEANING OPERATION (LINE NO. 1) INCLUDING: FIVE SUPER-FLO CONVEYORS, FOUR BUCKET ELEVATORS, ONE WESTRUP FAU 1500 SEED CLEANER, ONE DESTONER, ONE OLIVER 3600 GRAVITY TABLE, AND ONE COLOR SORTER; ALL SERVED BY ONE SAUNCO SJTW10-224-3719 BAGHOUSE NO. 1

C-409-9-8: 12 MMBTU/HR ROASTING OPERATION (LINE NO. 1) INCLUDING: ONE NATURAL GAS-FIRED ROASTER, ONE WESTRUP FAU 1500 SEED CLEANER, AND ONE SEED SEASONING PROCESS; ALL SERVED BY A CREWS TWO-STAGE WET SCRUBBER (SHARED WITH C-409-13)

C-409-10-0: 10 HP BULK SEED UNLOADING OPERATION INCLUDING: FOUR RAW SEED STORAGE SILOS, ONE 2 HP SUPER-FLO CONVEYOR, ONE 7.5 HP BUCKET ELEVATOR, AND ONE 0.5 HP CONSIGNER (ELEVATOR TO FOUR STORAGE SILOS)

C-409-11-2: RAW SEED CLEANING OPERATION (LINE NO. 2) INCLUDING: FIVE SUPER-FLO CONVEYORS, FOUR BUCKET ELEVATORS, ONE WESTRUP FAU 1500 SEED CLEANER, ONE DESTONER, ONE OLIVER 3600 GRAVITY TABLE, AND ONE COLOR SORTER; ALL SERVED BY ONE SHICK MODEL 16TR10X224 PULSE JET CLEANING BAGHOUSE NO. 2

C-409-12-0: 12 MMBTU/HR ROASTING OPERATION (LINE NO. 2) INCLUDING: ONE GAS-FIRED ROTARY DRUM ROASTER, FANS (246.0 HP TOTAL), ONE BUCKET ELEVATOR, CONVEYORS, ONE COOLER, ONE CLIPPER 298D SEED CLEANER; SERVED BY ONE 20,000 CFM DUCON MODEL II TYPE L MULTIVANE AIR SCRUBBER NO. 2

C-409-13-3: PACKAGING OPERATION WITH FIFTEEN MACHINES, SERVED BY CREWS TWO-STAGE WET SCRUBBER (SHARED WITH C-409-9)

V. Calculations

A. Assumption:

- The results of all Historical Actual Emission (HAE) and Actual Emission Reduction (AER) calculations are rounded to the nearest whole number.
- Since permit unit -9 and -13 vent to the same scrubber listed under permit unit -9 and since the emissions from the scrubber have been source tested, the emissions from the both units will be calculated as the emission factor from the source tests multiplied times the throughput of permit unit -9 so as to not double count the emissions.

B. Emission factors:

C-409-8-1 (Raw Seed Cleaning Operation):

PM₁₀ is the only pollutant of concern emitted from this unit.

From the permit, the emissions were limited to 1.1 lb-PM₁₀/day and the throughput to 72 tons/day; therefore, the emission factor is calculated as 1.1 lb-PM₁₀/day ÷ 72 tons/day = 0.015 lb-PM₁₀/ton.

C-409-9 (12 MMBtu/hr Roasting Operation):

The following are emission factors for this operation:

Pollutant	Emission Factor		Source
NO _x	27.5 lb/MMscf (0.0275 lb/MMBtu)	2.4 ppmv @ 19% O ₂	Average of Source Tests From 2006 – 2017 (See Appendix II)
SO _x	0.6 lb/MMscf (0.0006 lb/MMBtu)		District Policy APR 1720
PM ₁₀	0.314 lb/ton		
CO	55.0 lb/MMscf (0.0550 lb/MMBtu)	7.9 ppmv @ 19% O ₂	Average of Source Tests From 2006 – 2017 (See Appendix II)
VOC	6.0 lb/MMscf (0.0060 lb/MMBtu)	1.5 ppmv @ 19% O ₂	

C-409-10-0 (Bulk Seed Unloading Operation):

PM₁₀ is the only pollutant of concern emitted from this unit.

From the permit, the emissions were limited to 8.6 lb-PM₁₀/day and the throughput from the other permit units was limited to 72 tons/day; therefore, the emission factor can be calculated as $8.6 \text{ lb-PM}_{10}/\text{day} \div 72 \text{ tons/day} = 0.12 \text{ lb-PM}_{10}/\text{ton}$.

C-409-11-2 (Raw Seed Cleaning Operation):

PM₁₀ is the only pollutant of concern emitted from this unit.

From the permit, the emissions were limited to 0.1 lb-PM₁₀/day and the throughput was limited to 72 tons/day; therefore, the emission factor can be calculated as $0.1 \text{ lb-PM}_{10}/\text{day} \div 72 \text{ tons/day} = 0.001 \text{ lb-PM}_{10}/\text{ton}$.

C-409-12-0 (12 MMBtu/hr Roasting Operation):

The following are emission factors for this operation:

Pollutant	Emission Factor	Source
NO _x	130 lb/MMscf (0.13 lb/MMBtu)	Permitted Limit of 38.4 lb/day ÷ (12 MMBtu/hr x 24 hr/day) = 0.13 lb/MMBtu
SO _x	0.69 lb/MMscf (0.00069 lb/MMBtu)	Permitted Limit of 0.2 lb/day ÷ (12 MMBtu/hr x 24 hr/day)
PM ₁₀	9.72 lb/MMscf (0.00972 lb/MMBtu)	Permitted Limit of 2.8 lb/day ÷ (12 MMBtu/hr x 24 hr/day)
CO	5.55 lb/MMscf (0.00555 lb/MMBtu)	Permitted Limit of 1.6 lb/day ÷ (12 MMBtu/hr x 24 hr/day)
VOC	2.78 lb/MMscf (0.00278 lb/MMBtu)	Permitted Limit of 0.8 lb/day ÷ (12 MMBtu/hr x 24 hr/day)

C-409-13-3 (Packaging Operation):

As explained above, since the emissions from this unit are vented through the scrubber listed under permit -9, the emissions calculated under permit -9 are representative of both units -9 and -13 and no additional emissions will be calculated for this unit.

C. Baseline Period Determination:

Section 3.9 of District Rule 2201 defines the baseline period as "two consecutive years of operation immediately prior to the submission of the complete application" or "another time period of at least two consecutive years within the five years immediately prior to the submission of the complete application if it is more representative of normal source operation".

Since the applicant recently purchased the facility (2017) and does not have records from 2016, 2010, 2009 or 2007, the applicant proposes to use the six consecutive years of operation immediately prior to the submission of the complete application to represent normal source operation.

The facility began shutting down operation in early 2015; therefore, operation in 2015 is not representative of normal source operation in terms of throughput.

The quarterly emissions are taken from the facility's emissions inventory to establish the quarterly emission rates. The annual emissions are assumed to have been emitted evenly throughout the annual quarters since the facility is not a seasonal source (See Appendix III).

Each consecutive two-year period is compared with the ten-year normal source operating average; the two-year period that is closest to the normal source operating average is determined to be the baseline period. Using this methodology, the period most representative of normal source operation that will be used as the baseline period is 3rd quarter from 2012 – 2nd quarter 2014 (see Appendix IV of this document).

D. Historical Actual Emissions (HAE)

Historical Actual Emissions (HAEs) are emissions that actually occurred during the baseline period, after discounting for:

- Any emission reductions required or encumbered by any laws, rules, regulations, agreements, orders, or permits; and
- Any emissions reductions attributed to a control measure noticed for workshop, or proposed or contained in a State Implementation Plan, and
- Any emission reductions proposed in the District air quality plan for attaining the annual reductions required by the California Clean Air Act, and
- Any Actual Emissions in excess of those required or encumbered by any laws, rules, regulations, orders, or permits.

1. Applicable District Rules

Pursuant to District Rule 2201, 3.23, the HAE must be discounted for any emissions reductions required or encumbered by any laws, rules, regulations, agreements, orders, or permits.

There are no District Prohibitory Rules specifically applicable to the raw seed cleaning, roasting, seed unloading or packaging operations (C-409-8 through -13).

Additionally, there are no New Source Performance Standards (NSPS) or National Emission Standards for Hazardous Air Pollutants (NESHAPs) applicable to these operations.

2. State Implementation Plan (SIP)

Pursuant to District Rule 2201, 3.23, the HAE must be discounted for any emissions reductions attributed to a control measure noticed for workshop, or proposed or contained in a State Implementation Plan.

There are no control measures noticed for workshop, or proposed or contained in a State Implementation Plan applicable the sources in this project. Therefore, the Historical Actual Emissions will be calculated in such a manner that they are fully surplus.

3. District Air Quality Plan

Pursuant to District Rule 2201, 3.23, the HAE must be discounted for any emissions reductions proposed in the District air quality plan for attaining the annual reductions required by the California Clean Air Act.

Currently there are no emissions reductions proposed in any District air quality plans for attaining the annual reductions required by the California Clean Air Act.

4. Excess Emissions

Pursuant to District Rule 2201, 3.23, the HAE must be discounted for any Actual Emissions in excess of those required or encumbered by any laws, rules, regulations, orders, or permits.

There are no emissions in excess of those required or encumbered by any laws, rules, regulations, orders, or permits.

5. HAE Summary

The HAE is calculated in Appendix V and summarized in the following table:

Pollutant	1st Quarter (lb)	2nd Quarter (lb)	3rd Quarter (lb)	4th Quarter (lb)
NOx	558	558	470	470
SOx	6	6	6	6
PM ₁₀	987	987	1,326	1,326
Portion of PM ₁₀ That is PM _{2.5}	574	574	783	783
CO	402	402	347	347
VOC	50	50	44	44

E. Actual Emissions Reductions

Per District Rule 2201, section 4.12, Actual Emissions Reductions (AER) shall be calculated, on a pollutant-by-pollutant basis, as follows:

$$\text{AER} = \text{HAE} - \text{PE2}$$

Where:

HAE = Historic Actual Emissions

PE2 = Post Project Potential to Emit

Since the units have been shut down, PE2 is equal to zero. Therefore, AER is equal to HAE.

F. Air Quality Improvement Deduction

Per District Rule 2201, section 4.12.1, prior to banking, AER shall be discounted by 10% for Air Quality Improvement Deduction. Therefore, the Air Quality Improvement Deduction for emissions from the permit unit is summarized in the following table:

Pollutant	1 st Quarter (lb)	2 nd Quarter (lb)	3 rd Quarter (lb)	4 th Quarter (lb)
NOx	56	56	47	47
SOx	1	1	1	1
PM ₁₀	99	99	133	133
Portion of PM ₁₀ That is PM _{2.5}	57	57	78	78
CO	40	40	35	35
VOC	5	5	4	4

G. Bankable Emissions Reductions

The bankable emissions reductions are determined by subtraction of the air quality improvement deduction from the Actual Emissions Reductions. The bankable ERC of this unit is summarized in the table below:

Pollutant	1 st Quarter (lb)	2 nd Quarter (lb)	3 rd Quarter (lb)	4 th Quarter (lb)
NOx	502	502	423	423
SOx	5	5	5	5
PM ₁₀	888	888	1,193	1,193
Portion of PM ₁₀ That is PM _{2.5}	517	517	705	705
CO	362	362	312	312
VOC	45	45	40	40

VI. Compliance

To comply with the definition of Actual Emissions Reductions (Rule 2201, Section 3.2.1), the reduction must be:

A. Real

The emissions reductions were generated by the shutdown of the salted and roasted nuts and seeds manufacturing plant. The real emissions were calculated from actual historic production and fuel use data as well as recognized emission factors. The facility has been shutdown and all equipment have been removed from service and their permits subsequently were surrendered to the District.

Therefore, the emission reductions are real.

B. Enforceable

The reductions are enforceable since the permits for the salted and roasted nuts and seeds manufacturing operation have been surrendered to the District. Operating the equipment without permits would result in enforcement action being taken.

C. Quantifiable

The reductions are quantifiable since the reductions were calculated utilizing District-approved emission factors, and the actual baseline period production and natural gas usage.

D. Permanent

The salted and roasted nuts and seeds manufacturing operation has been shutdown and the PTOs have been surrendered. Operation of the equipment without a valid PTO is subject to enforcement action. Construction of equipment that would replace the equipment removed at this facility, regardless if constructed at the same or different location, must be authorized by the District after evaluation under all applicable rules, including District Rule 2201 (New and Modified Stationary Source Review Rule), under which any increase in emissions over the applicable threshold must be offset as described under Section VI.A above.

Additionally, the permitting database was queried to verify that the production is not being shifted elsewhere in the District and no permit applications were found to increase production of salted and roasted nuts and seeds.

Therefore, the emission reductions are permanent.

E. Surplus

Shutdown of the facility was not required by any law, rule, agreement, or regulation. As of the date this application was deemed complete, there are no known future rules or regulations that would have required any portion of these reductions. Therefore, the reductions are surplus.

F. Not used for the approval of an Authority to Construct or as Offsets

The ERCs generated by permanent shutdown of the entire facility were not used in the approval of an Authority to Construct or as offsets for any projects at the facility.

G. Timely Submittal

Pursuant to District Rule 2301, Section 4.2, in order to deem emissions reductions eligible for banking, an application for ERC has been filed no later than 180 days after the emissions reductions occurred.

Emissions from the surrendered permits permanently ceased on November 3, 2017 as this is the date the permits were surrendered. The emissions reduction banking application was received on October 9, 2017. Therefore, the application was received within 180 days of the date the reductions occurred. The ERC application was filed in a timely manner.

VII. Recommendation

Pending a successful public noticing period, issue Emission Reduction Credit Certificates for NOx, SOx, PM₁₀, CO, and VOC in the following amounts:

Pollutant	1 st Quarter (lb)	2 nd Quarter (lb)	3 rd Quarter (lb)	4 th Quarter (lb)	Total (lb)
NOx	502	502	423	423	1,850
SOx	5	5	5	5	20
PM ₁₀	888	888	1,193	1,193	4,162
Portion of PM ₁₀ That is PM _{2.5}	517	517	705	705	2,444
CO	362	362	312	312	1,348
VOC	45	45	40	40	170

Surrendered Permits to Operate

San Joaquin Valley Air Pollution Control District

PERMIT UNIT: C-409-8-1

EXPIRATION DATE: 10/31/2018

EQUIPMENT DESCRIPTION:

RAW SEED CLEANING OPERATION (LINE NO. 1) INCLUDING: FIVE SUPER-FLO CONVEYORS, FOUR BUCKET ELEVATORS, ONE WESTRUP FAU 1500 SEED CLEANER, ONE DESTONER, ONE OLIVER 3600 GRAVITY TABLE, AND ONE COLOR SORTER; ALL SERVED BY ONE SAUNCO SJTW10-224-3719 BAGHOUSE NO. 1

PERMIT UNIT REQUIREMENTS

1. No air contaminant shall be released into the atmosphere which causes a public nuisance. [District Rule 4102]
2. Particulate matter emissions shall not exceed 0.1 grains/dscf in concentration. [District Rule 4201]
3. No air contaminant shall be discharged into the atmosphere for a period or periods aggregating more than three minutes in any one hour which is as dark as, or darker than, Ringelmann 1 or 20% opacity. [District Rule 4101]
4. All equipment shall be maintained in good operating condition and shall be operated in a manner to minimize emissions of air contaminants into the atmosphere. [District Rule 2201]
5. The baghouse shall be equipped with a pressure differential gauge to indicate the pressure drop across the bags. The gauge shall be maintained in good working condition at all times and shall be located in an easily accessible location. [District Rule 2201]
6. The maximum pressure drop across the baghouse shall not exceed 6" of water column. [District NSR Rule]
7. The baghouse cleaning frequency and duration shall be adjusted to optimize the control efficiency. [District Rule 2201]
8. Material removed from dust collector(s) shall be disposed of in a manner preventing entrainment into the atmosphere. [District Rule 2201]
9. The raw seed cleaning operation (Line No. 1) shall not be operated unless emissions are vented through the baghouse. [District NSR Rule]
10. Daily throughput of seeds shall not exceed 72 tons per day. [District NSR Rule]
11. Particulate matter emissions from the raw seed cleaning operation (Line No. 1) shall not exceed 1.1 lb/day. [District NSR Rule]
12. Permittee shall record daily throughput of sunflower seeds, pistachios and pumpkin seeds. Records shall be retained on-site for a period of at least five years, and shall be made available for District inspection upon request. [District Rule 1070]

These terms and conditions are part of the Facility-wide Permit to Operate.

Facility Name: PONDEROSA PAINT CO
Location: 5628 E SHIELDS AVE, FRESNO, CA 93727

San Joaquin Valley Air Pollution Control District

PERMIT UNIT: C-409-9-8

EXPIRATION DATE: 10/31/2018

EQUIPMENT DESCRIPTION:

12 MMBTU/HR ROASTING OPERATION (LINE NO. 1) INCLUDING: ONE NATURAL GAS-FIRED ROASTER, ONE WESTRUP FAU 1500 SEED CLEANER, AND ONE SEED SEASONING PROCESS; ALL SERVED BY A CREWS TWO-STAGE WET SCRUBBER (SHARED WITH C-409-13)

PERMIT UNIT REQUIREMENTS

1. No air contaminant shall be released into the atmosphere which causes a public nuisance. [District Rule 4102]
2. Particulate matter emissions shall not exceed 0.1 grains/dscf in concentration. [District Rule 4201]
3. No air contaminant shall be discharged into the atmosphere for a period or periods aggregating more than three minutes in any one hour which is as dark as, or darker than, Ringelmann 1 or 20% opacity. [District Rule 4101]
4. All equipment shall be maintained in good operating condition and shall be operated in a manner to minimize emissions of air contaminants into the atmosphere. [District Rule 2201]
5. The flow regulator valves to the air atomized lances, the first and second stage venturis, and the demister pad, each shall be set at the position used to demonstrate compliance during the most recent source test. [District Rule 2201]
6. The water flow regulator valve position for the air atomized lances, first and second stage venturis, and the mesh pad, shall be monitored and recorded on a weekly basis. [District Rule 2201]
7. The water flow to the air atomized lances shall be monitored by reading the rotameter on the pump skid and the result recorded weekly. [District Rule 2201]
8. If the position of a water regulator valve has deviated from the setting determined during the most recent source test, then the permittee shall take action to correct the valve position. [District Rule 2201]
9. All spray nozzles within the scrubber, including those associated with the venturis, the air atomized lances and the mesh pad, shall be inspected for blockage at least monthly. Records shall be maintained of the date of inspection, nozzle condition, and any corrective action taken. [District Rule 2201]
10. The water pressure in the water line to the scrubber must be at least 55 psi unless another pressure is determined during source testing. [District Rule 2201]
11. Scrubber sprays and/or nozzles shall be maintained in optimum working condition. [District Rule 2201]
12. Fresh scrubber liquid shall be added continuously as necessary to maintain scrubbing efficiency. [District Rule 2201]
13. The roasting operation (Line No. 1), associated after-roast seed cleaner, and the seasoning process shall not be operated unless exhausting through the Crews two-stage wet scrubber. [District Rule 2201]
14. Daily throughput of seeds for roasting operation (Line No. 1) shall not exceed 72 tons per day. [District Rule 2201]
15. If the throughput rate exceeds that for which compliance was demonstrated during source testing, the permittee shall conduct an emission test within 60 days, utilizing District-approved test methods, to determine compliance with the applicable emissions limits at the new throughput rate. [District Rule 2201]
16. Emissions of PM10 from the Crews scrubber shall not exceed 3.12 lb/hr. [District Rule 2201]

PERMIT UNIT REQUIREMENTS CONTINUE ON NEXT PAGE
These terms and conditions are part of the Facility-wide Permit to Operate.

17. The product throughput rate, in lb/hr, the fuel flow rate to the roaster, water line pressure for the scrubber, and the position of the water flow regulator valves for the scrubber shall be recorded during source testing. [District Rule 2201]
18. Source testing shall be conducted using the methods and procedures approved by the District. The District must be notified at least 30 days prior to any compliance source test, and a source test plan must be submitted for approval at least 15 days prior to testing. [District Rule 1081]
19. The results of each source test shall be submitted to the District within 60 days thereafter. [District Rule 1081]
20. Source testing to demonstrate compliance with particulate matter emission limits shall be conducted at least once every twelve months. [District Rule 2201]
21. Source testing to determine compliance with NOx, CO, and VOC emission limits shall be conducted every two years. [District Rule 2201]
22. EPA Method 201/201A shall be used to measure the PM10 emission rate if there is no entrained water. If entrained water is significant in the exhaust, then EPA Method 5 shall be used and all PM will be considered PM10. [District Rule 2201]
23. Source testing to measure NOx emissions shall be conducted using EPA Method 7E or ARB Method 100. [District Rule 2201]
24. Source testing to measure CO emissions shall be conducted using EPA Method 10 or ARB Method 100. [District Rule 2201]
25. Source testing to measure stack gas oxygen concentration shall be conducted using EPA Method 3 or 3A, or CARB Method 100. [District Rule 2201]
26. Source testing to measure Volatile Organic Compounds (VOC) shall be conducted using EPA Method 18 and analyzed for low weight hydrocarbons. [District Rule 2201]
27. Records of daily seed process rates and fuel consumption shall be maintained. All records shall be retained on-site for a period of at least 5 years, and shall be made available for District inspection upon request. [District Rule 1070]

These terms and conditions are part of the Facility-wide Permit to Operate.

San Joaquin Valley Air Pollution Control District

RAW SEED CLEANING OPERATION (LINE NO. 2) INCLUDING: FIVE SUPER-FLO CONVEYORS, FOUR BUCKET ELEVATORS, ONE WESTRUP FAU 1500 SEED CLEANER, ONE DESTONER, ONE OLIVER 3600 GRAVITY TABLE, AND ONE COLOR SORTER; ALL SERVED BY ONE SHICK MODEL 16TR10X224 PULSE JET CLEANING BAGHOUSE NO. 2

PERMIT UNIT REQUIREMENTS

1. All equipment shall be maintained in good operating condition and shall be operated in a manner to minimize emissions of air contaminants into the atmosphere. [District Rule 2201]
2. No air contaminant shall be released into the atmosphere which causes a public nuisance. [District Rule 4102]
3. Particulate matter emissions shall not exceed 0.1 grains/dscf in concentration. [District Rule 4201]
4. No air contaminant shall be discharged into the atmosphere for a period or periods aggregating more than three minutes in any one hour which is as dark as, or darker than, Ringelmann 1 or 20% opacity. [District Rule 4101]
5. The daily throughput of raw seeds cleaning operation (Line No. 2) shall not exceed 72 tons per day. [District NSR Rule]
6. Particulate matter emissions from the raw seed cleaning operation (Line No. 2) shall not exceed 0.1 lb/day. [District NSR Rule]
7. The raw seed cleaning operation (Line No. 2) shall not be operated unless emissions are vented through the baghouse. [District NSR Rule]
8. The baghouse exhaust fan shall be switched on prior to the start-up of raw seed cleaning operation. [District Rule 2201]
9. The baghouse shall be maintained and operated according to manufacturer's specifications. [District Rule 2201]
10. The baghouse shall be equipped with a pressure differential gauge to indicate the pressure drop across the bags. The gauge shall be maintained in good working condition at all times and shall be located in an easily accessible location. [District Rule 2201]
11. Baghouse shall operate at all times with a minimum differential pressure of 0 inch water column and a maximum differential pressure of 6 inches water column. [District Rule 2201]
12. The baghouse cleaning frequency and duration shall be adjusted to optimize the control efficiency. [District Rule 2201]
13. Material removed from the dust collector(s) shall be disposed of in a manner preventing entrainment into the atmosphere. [District Rule 2201]
14. Replacement bags numbering at least 10% of the total number of bags in the baghouse shall be maintained on the premises. [District Rule 2201]
15. Differential operating pressure shall be monitored and recorded on each day that the baghouse operates. [District Rule 2201]

PERMIT UNIT REQUIREMENTS CONTINUE ON NEXT PAGE
These terms and conditions are part of the Facility-wide Permit to Operate.

16. Records of all maintenance of the baghouse, including all change outs of filter media, shall be maintained. [District Rule 2201]
17. The permittee shall record daily throughput of sunflower seeds, pistachios and pumpkin seeds processed. [District Rule 2201]
18. All records shall be retained on-site for a period of at least 5 years, and shall be made available for District inspection upon request. [District Rule 1070]

These terms and conditions are part of the Facility-wide Permit to Operate.

Facility Name: PONDEROSA PAINT CO
Location: 5628 E SHIELDS AVE, FRESNO, CA 93727
C-409-11-2 Oct 8 2017 121PM - THAOS

San Joaquin Valley Air Pollution Control District

PERMIT UNIT: C-409-12-0

EXPIRATION DATE: 10/31/2018

EQUIPMENT DESCRIPTION:

12 MMBTU/HR ROASTING OPERATION (LINE NO. 2) INCLUDING: ONE GAS-FIRED ROTARY DRUM ROASTER, FANS (246 0 HP TOTAL), ONE BUCKET ELEVATOR, CONVEYORS, ONE COOLER, ONE CLIPPER 298D SEED CLEANER; SERVED BY ONE 20,000 CFM DUCON MODEL II TYPE L MULTIVANE AIR SCRUBBER NO. 2

PERMIT UNIT REQUIREMENTS

1. No air contaminant shall be released into the atmosphere which causes a public nuisance. [District Rule 4102]
2. Particulate matter emissions shall not exceed 0.1 grains/dscf in concentration. [District Rule 4201]
3. No air contaminant shall be discharged into the atmosphere for a period or periods aggregating more than three minutes in any one hour which is as dark as, or darker than, Ringelmann 1 or 20% opacity. [District Rule 4101]
4. All equipment shall be maintained in good operating condition and shall be operated in a manner to minimize emissions of air contaminants into the atmosphere. [District Rule 2201]
5. Scrubber liquid supply (at inlet to scrubber) shall have an operational flow meter. [District Rule 2201]
6. The scrubber must have a water flow rate of 42 gallons per minute and a pressure drop of at least 6" water column. [District NSR Rule]
7. Scrubber sprays and/or nozzles shall be maintained in optimum working condition. [District Rule 2201]
8. Fresh scrubber liquid shall be added continuously as necessary to maintain scrubbing efficiency. [District NSR Rule]
9. The roasting operation (Line No. 2) shall not be operated unless emissions are vented through the scrubber. [District NSR Rule]
10. Rotary Drum Roaster (Line No. 2) shall be fired on natural gas only. [District NSR Rule]
11. Daily throughput of seeds shall not exceed 72 tons per day. [District NSR Rule]
12. Daily emissions shall not exceed any of the following limits: 2.8 lb PM10/day, 0.2 lb SOx/day, 38.4 lb NOx/day, 0.8 lb VOC/day, or 1.6 lb CO/day. [District NSR Rule]
13. Permittee shall record daily seed process rates and fuel consumption. These records shall be retained on-site for a period of at least five years, and shall be made available for District inspection upon request. [District Rule 1070]

These terms and conditions are part of the Facility-wide Permit to Operate.

Facility Name: PONDEROSA PAINT CO
Location: 5628 E SHIELDS AVE, FRESNO, CA 93727
C-409-12-0 Od 9/2017 1:21PM -- THAO6

San Joaquin Valley Air Pollution Control District

PERMIT UNIT: C-409-13-3

EXPIRATION DATE: 10/31/2018

EQUIPMENT DESCRIPTION:

PACKAGING OPERATION WITH FIFTEEN MACHINES, SERVED BY CREWS TWO-STAGE WET SCRUBBER (SHARED WITH C-409-9)

PERMIT UNIT REQUIREMENTS

1. No air contaminant shall be released into the atmosphere which causes a public nuisance. [District Rule 4102]
2. Particulate matter emissions shall not exceed 0.1 grains/dscf in concentration. [District Rule 4201]
3. No air contaminant shall be discharged into the atmosphere for a period or periods aggregating more than three minutes in any one hour which is as dark as, or darker than, Ringelmann 1 or 20% opacity. [District Rule 4101]
4. All equipment shall be maintained in good operating condition and shall be operated in a manner to minimize emissions of air contaminants into the atmosphere. [District Rule 2201]
5. The packaging operation shall not be operated unless exhausting through the Crews two-stage wet scrubber. [District Rule 2201]
6. The total daily processing rate for packaging shall not exceed 144 tons of finished sunflower, pumpkin and pistachio seeds, combined. [District Rule 2201]
7. The Crews two-stage wet scrubber shall be operated in the manner described in permit conditions for permit unit #C-409-9. [District Rule 2201]
8. Emissions of PM10 from the Crews scrubber shall not exceed 3.12 lb/hr. [District Rule 2201]
9. Total combined emissions from the Crews scrubber (shared with unit #C-409-9) shall not exceed any of the following limits: 38.4 lb NOx/day, 22.7 lb VOC/day, or 31.2 lb CO/day. [District Rule 2201]
10. The product packaging rate, in lb/hr, shall be recorded during source testing. [District Rule 2201]
11. Source testing to demonstrate compliance with the permitted emission rates shall be performed as detailed in permit conditions for permit unit #C-409-9, and shall be conducted when the packaging line is operational. [District Rule 2201]
12. Records of daily seed process rates shall be maintained. All records shall be retained on-site for a period of at least 5 years, and shall be made available for District inspection upon request. [District Rule 1070]

These terms and conditions are part of the Facility-wide Permit to Operate.

SURVEY FOR THE ANNUAL EMISSION INVENTORY : 2012

CONAGRA FOODS, ACCOUNTS PAYABLE
PO BOX 642210
OMAHA, NE 68164

FACILITY ID# : C-409
TAD #: 10-409
SIC #: 2068
PHONE #: (209) 291-0231
TOXID: 410
US Form Required: No

SITE ADDRESS : 5626 E SHIELDS AVENUE, FRESNO

Is this information considered:

CONFIDENTIAL
 NOT CONFIDENTIAL

Note: All requests for confidentiality must be supported by a written justification (Title 17, section 91010, California Administrative Code)

WorkSheet for Permit # : C-409-13-3

PACKAGING OPERATION WITH FIFTEEN MACHINES, SERVED BY CREWS TWO-STAGE WET SCRUBBER (SHARED WITH C-409-9)

GENERAL MATERIAL PROCESSING & HANDLING

Annual Process Data:

Materials Processed/Handled

SUNFLOWER SEED
PUMPKIN SEED

Annual Quantity (include units)

17,663 TONS

1,651 TONS

Waste or By-Products Generated

Annual Quantity (include units)

Q
Q

Operating Schedule:

For equipment with regular operating schedule:

Hours/Day: 24 Days/Week: 5-6 Weeks/Year: 52

For equipment that is not operated regularly:

Estimated annual operating hours: _____

Distance to Nearest Business from Equipment 250 (feet)

Distance to Nearest Residence from Equipment 1650 (feet)

Comments: _____

Appendix V

Historical Actual Emissions Calculations

Historical Actual Emission (HAE) for Permit C-409-8

PM₁₀:

HAE_{PM10} = Emission Factor (lb-PM₁₀/ton) x Throughput (tons/qtr)

Typical calculation is shown below:

2012 3rd qtr = 0.015 lb-PM₁₀/ton x 3,312 tons/qtr = 50 lb-PM₁₀/qtr

The remaining calculations are summarized in the following tables:

2012 HAE (lb-PM ₁₀ /qtr)			
1 st qtr	2 nd qtr	3 rd qtr	4 th qtr
n/a	n/a	50	50
2013 HAE (lb-PM ₁₀ /qtr)			
1 st qtr	2 nd qtr	3 rd qtr	4 th qtr
30	30	30	30
2014 HAE (lb-PM ₁₀ /qtr)			
1 st qtr	2 nd qtr	3 rd qtr	4 th qtr
28	28	n/a	n/a
Average HAE (lb-PM ₁₀ /qtr)			
1 st qtr	2 nd qtr	3 rd qtr	4 th qtr
29	29	40	40

Historical Actual Emission (HAE) for Permit C-409-9

NOx:

HAE_{NOx} = Emission Factor (lb-NOx/MMscf) x Throughput (MMscf/qtr)

Typical calculation is shown below:

$$2012 \text{ 3rd qtr} = 27.5 \text{ lb-NOx/MMscf} \times 4.94 \text{ MMscf/qtr} = 290 \text{ lb-NOx/qtr}$$

The remaining calculations are summarized in the following tables:

2012 HAE (lb-NOx/qtr)			
1 st qtr	2 nd qtr	3 rd qtr	4 th qtr
n/a	n/a	136	136
2013 HAE (lb-NOx/qtr)			
1 st qtr	2 nd qtr	3 rd qtr	4 th qtr
198	198	198	198
2014 HAE (lb-NOx/qtr)			
1 st qtr	2 nd qtr	3 rd qtr	4 th qtr
187	187	n/a	n/a
Average HAE (lb-NOx/qtr)			
1 st qtr	2 nd qtr	3 rd qtr	4 th qtr
193	193	167	167

SOx:

HAE_{SOx} = Emission Factor (lb-SOx/MMscf) x Throughput (MMscf/qtr)

Typical calculation is shown below:

$$2012 \text{ 3rd qtr} = 0.6 \text{ lb-SOx/MMscf} \times 4.94 \text{ MMscf/qtr} = 3 \text{ lb-SOx/qtr}$$

The remaining calculations are summarized in the following tables:

2012 HAE (lb-SOx/qtr)			
1 st qtr	2 nd qtr	3 rd qtr	4 th qtr
n/a	n/a	3	3
2013 HAE (lb-SOx/qtr)			
1 st qtr	2 nd qtr	3 rd qtr	4 th qtr
4	4	4	4
2014 HAE (lb-SOx/qtr)			
1 st qtr	2 nd qtr	3 rd qtr	4 th qtr
4	4	n/a	n/a
Average HAE (lb-SOx/qtr)			
1 st qtr	2 nd qtr	3 rd qtr	4 th qtr
4	4	4	4

PM₁₀:

HAE_{PM10} = Emission Factor (lb-PM₁₀/ton) x Throughput (tons/qtr)

Typical calculation is shown below:

$$2012 \text{ 3}^{\text{rd}} \text{ qtr} = 0.314 \text{ lb-PM}_{10}/\text{ton} \times 3,312 \text{ tons/qtr} = 1,040 \text{ lb-PM}_{10}/\text{qtr}$$

The remaining calculations are summarized in the following tables:

2012 HAE (lb-PM ₁₀ /qtr)			
1 st qtr	2 nd qtr	3 rd qtr	4 th qtr
n/a	n/a	1,040	1,040
2013 HAE (lb-PM ₁₀ /qtr)			
1 st qtr	2 nd qtr	3 rd qtr	4 th qtr
630	630	630	630
2014 HAE (lb-PM ₁₀ /qtr) ²			
1 st qtr	2 nd qtr	3 rd qtr	4 th qtr
630	630	n/a	n/a
Average HAE (lb-PM ₁₀ /qtr)			
1 st qtr	2 nd qtr	3 rd qtr	4 th qtr
630	630	835	835

CO:

HAE_{CO} = Emission Factor (lb-CO/MMscf) x Throughput (MMscf/qtr)

Typical calculation is shown below:

$$2012 \text{ 3}^{\text{rd}} \text{ qtr} = 55.0 \text{ lb-CO/MMscf} \times 4.94 \text{ MMscf/qtr} = 578 \text{ lb-CO/qtr}$$

The remaining calculations are summarized in the following tables:

2012 HAE (lb-CO/qtr)			
1 st qtr	2 nd qtr	3 rd qtr	4 th qtr
n/a	n/a	272	272
2013 HAE (lb-CO/qtr)			
1 st qtr	2 nd qtr	3 rd qtr	4 th qtr
396	396	396	396
2014 HAE (lb-CO/qtr)			
1 st qtr	2 nd qtr	3 rd qtr	4 th qtr
375	375	n/a	n/a
Average HAE (lb-CO/qtr)			
1 st qtr	2 nd qtr	3 rd qtr	4 th qtr
386	386	334	334

² Although the annual throughput was reported as 8,025 tons of seeds processed per year, the throughput used for this unit is the same as was reported for unit -8 for this year of 7,467 tons of seeds processed per year since the amount of seeds processed cannot be higher than the amount of seeds cleaned.

VOC:

HAE_{voc} = Emission Factor (lb-VOC/MMscf) x Throughput (MMscf/qtr)

Typical calculation is shown below:

$$2012 \text{ 3}^{\text{rd}} \text{ qtr} = 6.0 \text{ lb-VOC/MMscf} \times 4.94 \text{ MMscf/qtr} = 63 \text{ lb-VOC/qtr}$$

The remaining calculations are summarized in the following tables:

2012 HAE (lb-VOC/qtr)			
1 st qtr	2 nd qtr	3 rd qtr	4 th qtr
n/a	n/a	30	30
2013 HAE (lb-VOC/qtr)			
1 st qtr	2 nd qtr	3 rd qtr	4 th qtr
43	43	43	43
2014 HAE (lb-VOC/qtr)			
1 st qtr	2 nd qtr	3 rd qtr	4 th qtr

Average HAE (lb-VOC/qtr)			
1 st qtr	2 nd qtr	3 rd qtr	4 th qtr
42	42	37	37

Historical Actual Emission (HAE) for Permit C-409-10

PM₁₀:

HAE_{PM10} = Emission Factor (lb-PM₁₀/ton) x Throughput (tons/qtr)

Typical calculation is shown below:

2012 3rd qtr = 0.12 lb-PM₁₀/ton x 4,416 tons/qtr = 530 lb-PM₁₀/qtr

The remaining calculations are summarized in the following tables:

2012 HAE (lb-PM ₁₀ /qtr)			
1 st qtr	2 nd qtr	3 rd qtr	4 th qtr
n/a	n/a	530	530
