

JAN 15 2019

Michael Georgino B&B Surplus Inc 7020 Rosedale Hwy Bakersfield, CA 93308

Re: Notice of Preliminary Decision - Authority to Construct

Facility Number: S-1822 Project Number: S-1183984

Dear Mr. Georgino:

Enclosed for your review and comment is the District's analysis of B&B Surplus Inc's application for an Authority to Construct for an IC engine powering an electrical generator, at 7020 Rosedale Hwy in Bakersfield, CA.

The notice of preliminary decision for this project will be published approximately three days from the date of this letter. Please submit your written comments on this project within the 30-day public comment period, as specified in the enclosed public notice.

Also enclosed is a copy of the California Health and Safety Code (sec. §42301.6) and the public notification letters sent out to the parents or guardians of students at Vista West High School and residences within 1,000 feet of the proposed project.

After addressing all comments made during the 30-day public notice and school notice periods, the District intends to issue the Authority to Construct.

Thank you for your cooperation in this matter. If you have any questions regarding this matter, please contact Mr. Thomas Aguirre of Permit Services at (661) 392-5613.

Sincerely.

Amaud Mariollet

Director of Permit Services

San Joaquin Valley Air Pollution Control District Authority to Construct **Application Review** Natural Gas-Fired Emergency Standby IC Engine

Facility Name: B&B Surplus Inc.

Date: December 17, 2018

Mailing Address: 7020 Rosedale Hwy

Engineer: Thomas Aguirre

Bakersfield, CA 93308

Lead Engineer: Steve Leonard

Contact Person: Michael Georgino

Telephone: 661-589-0381

Application #: S-1822-2-0

Project #: S-1183984

Complete: November 15, 2018

Proposal

B&B Surplus Inc is proposing to permit a 97.7 bhp (intermittent) natural gas-fired emergency standby internal combustion (IC) engine powering a generator. Please note that the engine was installed in 2001, the BACT requirements will be based on the BACT guideline in effect at the time of installation.

II. Applicable Rules

Rule 2201 New and Modified Stationary Source Review Rule (02/18/16)

Rule 2520 Federally Mandated Operating Permits (6/21/01)

Rule 4001 New Source Performance Standards (4/14/99)

Rule 4101 Visible Emissions (2/17/05)

Rule 4102 Nuisance (12/17/92)

Rule 4201 Particulate Matter Concentration (12/17/92)

Rule 4701 Stationary Internal Combustion Engines - Phase 1 (8/21/03)

Rule 4702 Stationary Internal Combustion Engines - Phase 2 (11/14/13)

Rule 4801 Sulfur Compounds (12/17/92)

Health Risk Assessment CH&SC 41700

CH&SC 42301.6 School Notice

Title 17 CCR, Section 93115 - Airborne Toxic Control Measure (ATCM) for Stationary

Compression-Ignition (CI) Engines

Public Resources Code 21000-21177: California Environmental Quality Act (CEQA)

California Code of Regulations, Title 14, Division 6, Chapter 3, Sections 15000-15387:

CEQA Guidelines

III. Project Location

The project is located at 7020 Rosedale Hwy in Bakersfield, CA. The District has verified that the equipment is located within 1,000 feet of the outer boundary of a K-12 school. Therefore, the public notification requirement of California Health and Safety Code 42301.6 is applicable to this project.

IV. Process Description

The emergency standby engine powers an electrical generator. Other than emergency operation, the engine may be operated up to 100 hours per year for maintenance and testing purposes.

V. Equipment Listing

S-1822-2-0:

97.7 BHP INTERMITTENT CUMMINS MODEL WSG-10681-6005A RICH-BURN NATURAL GAS-FIRED EMERGENCY STANDBY IC

ENGINE POWERING AN ELECTRICAL GENERATOR

VI. Emission Control Technology Evaluation

The engine is equipped with:

[x] Positive Crankcase Ventilation (PCV) or 90% efficient control device

[] Non-Selective Catalytic Reduction

[] Air/Fuel Ratio or an O2 Controller

[] Lean Burn Technology

The PCV system reduces crankcase VOC and PM₁₀ emissions by at least 90% over an uncontrolled crankcase vent.

VII. General Calculations

A. Assumptions

Emergency operating schedule:

24 hours/day 100 hours/year

Non-emergency operating schedule:

8,578 dscf/MMBtu (40 CFR 60 Appendix B)

EPA F-factor (adjusted to 60 °F): Fuel heating value:

1,000 Btu/dscf (District Policy APR-1720, dated

12/20/01)

BHP to Btu/hr conversion:

2,542.5 Btu/bhp-hr

Sulfur concentration:

2.85 lb-S/MMscf (District Policy APR-1720,

dated 12/20/01)

Thermal efficiency of engine:

commonly ≈ 35%

B. Emission Factors

| Emission Factors | | | | |
|-------------------------------------------------------------------------|---------|--------|-------------------------------|--|
| Pollutant Emission Factor (Ib/MMBtu) Emission Factor (g/bhp-hr)* Source | | | | |
| NOx | | 6.1 | Emission Data Sheet | |
| SOx | 0.00285 | 0.0094 | Mass Balance Equation Below** | |
| PM ₁₀ *** | 0.019 | 0.063 | AP-42 (7/00) Table 3.2-3 | |
| CO | | 50.3 | Emission Data Sheet | |
| VOC | | 1.2 | Emission Data Sheet | |

**SOx is calculated as follows:

$$0.00285 \quad \frac{lb - SO_x}{MMBtu} \times \frac{1 \, MMBtu}{1,000,000 \, Btu} \times \frac{2,542.5 \, Btu}{bhp - hr} \times \frac{1 \, bhp \, input}{0.35 \, bhp \, out} \times \frac{453.6 \, g}{lb} = \quad 0.0094 \quad \frac{g - SO_x}{bhp - hr}$$

C. Calculations

1. Pre-Project Emissions (PE1)

Since this is a new emissions unit, PE1 = 0.

2. Post Project PE (PE2)

The daily and annual PE are calculated as follows:

| | Daily Post Project Emissions | | | | | |
|------------------|-----------------------------------|-----------------|------------------------------------------|----------------------|-----------------------|--|
| Pollutant | Emissions Factor (g/bhp-hr) | Rating (bhp) | Daily Hours of Operation (hrs/day) | Conversion (g/lb) | PE2 Total (lb/day) | |
| NOx | 6.1 | 97.7 | 24 | 453.6 | 31.5 | |
| SOx | 0.0094 | 97.7 | 24 | 453.6 | 0.0 | |
| PM ₁₀ | 0.063 | 97.7 | 24 | 453.6 | 0.3 | |
| СО | 50.3 | 97.7 | 24 | 453.6 | 260.0 | |
| VOC | 1.2 | 97.7 | 24 | 453.6 | 6.2 | |

^{***}P M_{10} value includes both filterable (9.50x10⁻³ lb/MMBtu) and condensable (9.91x10⁻³ lb/MMBtu) emissions.

| | Annual Post Project Emissions | | | | | |
|------------------|-----------------------------------|-----------------|---------------------------------------------|----------------------|----------------------|--|
| Pollutant | Emissions Factor (g/bhp-hr) | Rating (bhp) | Annual Hours of Operation (hrs/yr) | Conversion (g/lb) | PE2 Total (lb/yr) | |
| NOx | 6.1 | 97.7 | 100 | 453.6 | 131 | |
| SOx | 0.0094 | 97.7 | 100 | 453.6 | 0 | |
| PM ₁₀ | 0.063 | 97.7 | 100 | 453.6 | 1 | |
| CO | 50.3 | 97.7 | 100 | 453.6 | 1,083 | |
| VOC | 1.2 | 97.7 | 100 | 453.6 | 26 | |

3. Pre-Project Stationary Source Potential to Emit (SSPE1)

Pursuant to Section 4.9 of District Rule 2201, the Pre-Project Stationary Source Potential to Emit (SSPE1) is the Potential to Emit (PE) from all units with valid ATCs or PTOs at the Stationary Source and the quantity of Emission Reduction Credits (ERCs) which have been banked since September 19, 1991 for Actual Emissions Reductions that have occurred at the source, and which have not been used on-site.

Since this is a new facility, there are no existing permit units or any ERCs banked at this facility. Thus:

SSPE1 = 0 lb/yr for all criteria pollutants

4. Post Project Stationary Source Potential to Emit (SSPE2)

Pursuant to Section 4.10 of District Rule 2201, the Post Project Stationary Source Potential to Emit (SSPE2) is the Potential to Emit (PE) from all units with valid ATCs or PTOs, except for emissions units proposed to be shut down as part of the Stationary Project, at the Stationary Source and the quantity of Emission Reduction Credits (ERCs) which have been banked since September 19, 1991 for Actual Emissions Reductions that have occurred at the source, and which have not been used on-site.

Since this is a new facility, SSPE2 is equal to the change in emissions for the facility due to the installation of the new emergency standby IC engine, permit unit -2-0, as previously determined in Section VII.C.2. Thus:

| SSPE2 | | | | | |
|---------------------------|----------------------------|----------------------------|-----------------------------|---------------|----------------|
| Permit Unit | NO _X (lb/yr) | SO _X (lb/yr) | PM ₁₀ (lb/yr) | CO (lb/yr) | VOC (lb/yr) |
| -2-0, emergency IC engine | 131 | 0 | 1 | 1,083 | 26 |
| SSPE2 Total | 131 | 0 | 1 | 1,083 | 26 |

5. Major Source Determination

Pursuant to Section 3.24 of District Rule 2201, a Major Source is a stationary source with post project emissions or a Post Project Stationary Source Potential to Emit (SSPE2), equal to or exceeding one or more of the following threshold values. However, Section 3.24.2 states, "for the purposes of determining major source status, the SSPE2 shall not include the quantity of emission reduction credits (ERC) which have been banked since September 19, 1991 for Actual Emissions Reductions that have occurred at the source, and which have not been used on-site."

This facility does not contain ERCs which have been banked at the source; therefore, no adjustment to SSPE2 is necessary.

| | Major Source Determination | | | | | | |
|------------------|----------------------------|------------------|-----------------------------------|------------------------|--------------------------|--|--|
| Pollutant | SSPE1 (lb/yr) | SSPE2 (lb/yr) | Major Source Threshold (lb/yr) | Existing Major Source? | Becoming a Major Source? | | |
| NOx | 0 | 131 | 20,000 | No | No | | |
| SOx | 0 | 0 | 140,000 | No | No | | |
| PM ₁₀ | 0 | 1 | 140,000 | No | No | | |
| СО | 0 | 1,083 | 200,000 | No | No | | |
| VOC | 0 | 26 | 20,000 | No | No | | |

6. Baseline Emissions (BE)

BE = Pre-project Potential to Emit for:

- Any unit located at a non-Major Source,
- Any Highly-Utilized Emissions Unit, located at a Major Source,
- Any Fully-Offset Emissions Unit, located at a Major Source, or
- Any Clean Emissions Unit, located at a Major Source.

otherwise,

BE = Historic Actual Emissions (HAE), calculated pursuant to Section 3.23

Since this is a new emissions unit, BE = PE1 = 0 for all criteria pollutants.

7. SB 288 Major Modification

SB 288 Major Modification is defined in 40 CFR Part 51.165 as "any physical change in or change in the method of operation of a major stationary source that would result in a significant net emissions increase of any pollutant subject to regulation under the Act."

As discussed in Section VII.C.5 above, this facility is not a major source for any of the pollutants addressed in this project; therefore, the project does not constitute a SB 288 Major Modification.

8. Federal Major Modification

District Rule 2201, Section 3.18 states that Federal Major Modifications are the same as "Major Modification" as defined in 40 CFR 51.165 and part D of Title I of the CAA.

Since this facility is not a Major Source for any pollutants, this project does not constitute a Federal Major Modification. Additionally, since the facility is not a major source for PM₁₀ (140,000 lb/year), it is not a major source for PM_{2.5} (200,000 lb/year).

9. Quarterly Net Emissions Change (QNEC)

The QNEC is calculated solely to establish emissions that are used to complete the District's PAS emissions profile screen. Detailed QNEC calculations are included in Appendix C.

VIII. Compliance

Rule 2201 New and Modified Stationary Source Review Rule

A. Best Available Control Technology (BACT)

1. BACT Applicability

BACT requirements are triggered on a pollutant-by-pollutant basis and on an emissions unit-by-emissions unit basis for the following*:

- a) Any new emissions unit with a potential to emit exceeding two pounds per day.
- b) The relocation from one Stationary Source to another of an existing emissions unit with a potential to emit exceeding two pounds per day,

- c) Modifications to an existing emissions unit with a valid Permit to Operate resulting in an AIPE exceeding two pounds per day, and/or
- d) Any new or modified emissions unit, in a stationary source project, which results in a Major Modification.

a. New emissions units - PE > 2 lb/day

Since this engine is a new emissions unit, the daily emissions are compared to the BACT thresholds in the following table:

| | New Emissions Unit BACT Applicability | | | | | |
|------------------------------------------------------------------------------------------------|---------------------------------------|------------------------------------|-------|-----|--|--|
| Pollutant Daily Emissions for unit -2-0 (lb/day) BACT Threshold (lb/day) SSPE2 BACT Triggered? | | | | | | |
| NOx | 31.5 | > 2.0 | n/a | Yes | | |
| SOx | 0.0 | > 2.0 | n/a | No | | |
| PM ₁₀ | 1 | > 2.0 | n/a | No | | |
| СО | 260 | > 2.0 and SSPE2 ≥ 200,000 lb/yr | 1,083 | No | | |
| VOC | 6.2 | > 2.0 | n/a | Yes | | |

Thus BACT will be triggered for NO_X and VOC emissions from the engine for this project.

b. Major Modification

As discussed previously in Section VII.C.7, this project does not constitute a Major Modification. Therefore BACT is not triggered for a Major Modification.

2. BACT Guideline

BACT Guideline 3.1.5 (11/27/1996), which appears in Appendix A of this report, covers gas-fired emergency IC engines. Since this engine was installed in 2001, the BACT guideline in effect at the time of installation will be used for this evaluation.

3. Top Down BACT Analysis

Per District Policy APR 1305, Section IX, "A top-down BACT analysis shall be performed as a part of the Application Review for each application subject to the BACT requirements pursuant to the District's NSR Rule for source categories or classes covered in the BACT Clearinghouse, relevant information under each of the following steps may be simply cited from the Clearinghouse without further analysis."

^{*}Except for CO emissions from a new or modified emissions unit at a Stationary Source with an SSPE2 of less than 200,000 pounds per year of CO.

Pursuant to the attached Top-Down BACT Analysis, which appears in Appendix A of this report, BACT is satisfied with:

VOC: Positive Crankcase Ventilation (PCV)

Therefore, the following conditions will be listed on the ATC to ensure compliance:

- {3491} This IC engine shall be fired on Public Utility Commission (PUC) regulated natural gas only. [District Rules 2201 and 4801]
- {1897} This engine shall be equipped with either a positive crankcase ventilation (PCV) system which recirculates crankcase emissions into the air intake system for combustion, or a crankcase emissions control device of at least 90% control efficiency. [District Rule 2201]

B. Offsets

Since emergency IC engines are exempt from the offset requirements of Rule 2201, per Section 4.6.2, offsets are not required for this engine, and no offset calculations are required.

C. Public Notification

1. Applicability

Public noticing is required for:

- a. New Major Sources, which is a new facility that is also a Major Source,
- b. Major Modifications,
- c. Any new emissions unit with a Potential to Emit greater than 100 pounds during any one day for any one pollutant,
- d. Any project which results in the offset thresholds being surpassed, and/or
- e. Any project with an SSIPE of greater than 20,000 lb/year for any pollutant.

a. New Major Source

New Major Sources are new facilities, which are also Major Sources. As shown previously in Section VII.C.5, the SSPE2 is not greater than the Major Source threshold for any criteria pollutant. Therefore, public noticing is not required for this project for new Major Source purposes.

b. Major Modification

As demonstrated previously in Section VII.C.7, this project does not constitute a Major Modification; therefore, public noticing for Major Modification purposes is not required.

c. PE > 100 lb/day

The Daily PE for this new emissions unit is compared to the daily PE Public Notice Thresholds in the following table:

| | PE > 100 lb/day Public Notice Thresholds | | | | | |
|--------------------------------------------------------------------------------------------|------------------------------------------|-----|-----|--|--|--|
| Pollutant Daily PE for Public Notice Unit -2-0 Threshold Public Notice Triggered? (lb/day) | | | | | | |
| NOx | 31.5 | 100 | No | | | |
| SOx | 0.0 | 100 | No | | | |
| PM ₁₀ | 0.3 | 100 | No | | | |
| СО | 260 | 100 | Yes | | | |
| VOC | 6.2 | 100 | No | | | |

As detailed in the preceding table, the SO_x 100 lb/day threshold was surpassed with this project. Therefore, public noticing [is/is not] required for daily emissions greater than 100 lb/day for a new emissions unit.

d. Offset Threshold

The following table compares the SSPE1 with the SSPE2 to the offset thresholds in order to determine if any offset thresholds have been surpassed with this project.

| | Offset Threshold | | | | | |
|------------------|------------------|------------------|--------------------------|-------------------------|--|--|
| Pollutant | SSPE1 (lb/yr) | SSPE2 (lb/yr) | Offset Threshold (lb/yr) | Public Notice Required? | | |
| NOx | 0 | 131 | 20,000 | No | | |
| SOx | 0 | 0 | 54,750 | No | | |
| PM ₁₀ | 0 | 1 | 29,200 | No | | |
| СО | 0 | 1,083 | 200,000 | No | | |
| voc | 0 | 26 | 20,000 | No | | |

As detailed in the preceding table, there were no offset thresholds surpassed with this project. Therefore, public noticing is required for this project for surpassing the SSPE2 offset thresholds.

e. SSIPE > 20,000 lb/year

Public notification is required for any permitting action that results in a Stationary Source Increase in Permitted Emissions (SSIPE) of more than 20,000 lb/year of any affected pollutant. According to District policy, the

SSIPE is calculated as the Post Project Stationary Source Potential to Emit (SSPE2) minus the Pre-Project Stationary Source Potential to Emit (SSPE1), i.e. SSIPE = SSPE2 - SSPE1. The values for SSPE2 and SSPE1 are calculated according to Rule 2201, Sections 4.9 and 4.10, respectively. The SSIPE is compared to the SSIPE Public Notice thresholds in the following table:

| | SSIPE Public Notice Threshold | | | | | | |
|------------------|-------------------------------|------------------|------------------|----------------------------|-------------------------|--|--|
| Pollutant | SSPE2 (lb/yr) | SSPE1 (lb/yr) | SSIPE (lb/yr) | SSIPE Threshold (lb/yr) | Public Notice Required? | | |
| NOx | 131 | 0 | 131 | 20,000 | No | | |
| SOx | 0 | 0 | 0 | 20,000 | No | | |
| PM ₁₀ | 1 | 0 | 1 | 20,000 | No | | |
| СО | 1,083 | 0 | 1,083 | 20,000 | No | | |
| voc | 26 | 0 | 26 | 20,000 | No | | |

As detailed in the preceding table, there were no SSIPE thresholds surpassed with this project. Therefore, public noticing is not required for exceeding the SSIPE thresholds.

2. Public Notice Action

As discussed above, this project will result in emissions, for any criteria pollutant, which would subject the project to any of the noticing requirements listed above. Therefore, public notice will be required for this project.

D. Daily Emissions Limits

Daily Emissions Limitations (DELs) and other enforceable conditions are required by Section 3.15 to restrict a unit's maximum daily emissions, to a level at or below the emissions associated with the maximum design capacity. Per Sections 3.15.1 and 3.15.2, the DEL must be contained in the latest ATC and contained in or enforced by the latest PTO and enforceable, in a practicable manner, on a daily basis. DELs are also required to enforce the applicability of BACT. For this emergency standby IC engine, the DELs are stated in the form of emission factors, the maximum engine horsepower rating, and the maximum operational time of 24 hours per day. Therefore, the following condition (previously proposed in this engineering evaluation) will be listed on the ATC to ensure compliance:

 Emissions from this IC engine shall not exceed any of the following limits: 6.1 g-NOx/bhp-hr, 0.063 g-PM10/bhp-hr, 50.3 g-CO/bhp-hr, or 1.2 g-VOC/bhp-hr. [District Rule 2201]

E. Compliance Assurance

1. Source Testing

Pursuant to District Policy APR 1705, source testing is not required for emergency standby IC engines to demonstrate compliance with Rule 2201.

2. Monitoring

No monitoring is required to demonstrate compliance with Rule 2201.

3. Recordkeeping

Recordkeeping is required to demonstrate compliance with the offset, public notification, and daily emission limit requirements of Rule 2201. As required by District Rule 4702, *Stationary Internal Combustion Engines - Phase 2*, this IC engine is subject to recordkeeping requirements. Recordkeeping requirements, in accordance with District Rule 4702, will be discussed in Section VIII, *District Rule 4702*, of this evaluation.

4. Reporting

No reporting is required to ensure compliance with Rule 2201.

Rule 2520 Federally Mandated Operating Permits

Since this facility's potential to emit does not exceed any major source thresholds of Rule 2201, this facility is not a major source, and Rule 2520 does not apply.

Rule 4001 New Source Performance Standards (NSPS)

This rule incorporates NSPS from Part 60, Chapter 1, Title 40, Code of Federal Regulations (CFR); and applies to all new sources of air pollution and modifications of existing sources of air pollution listed in 40 CFR Part 60. However, no subparts of 40 CFR Part 60 apply to reciprocating natural gas-fired IC engines.

Rule 4101 Visible Emissions

Rule 4101 states that no air contaminant shall be discharged into the atmosphere for a period or periods aggregating more than three minutes in any one hour which is as dark as, or darker than, Ringelmann 1 or 20% opacity. Therefore, the following condition will be listed on the ATC to ensure compliance:

 {15} No air contaminant shall be discharged into the atmosphere for a period or periods aggregating more than three minutes in any one hour which is as dark as, or darker than, Ringelmann 1 or 20% opacity. [District Rule 4101]

Rule 4102 Nuisance

Rule 4102 states that no air contaminant shall be released into the atmosphere which causes a public nuisance. Public nuisance conditions are not expected as a result of these operations, provided the equipment is well maintained. Therefore, the following condition will be listed on the ATC to ensure compliance:

• {98} No air contaminant shall be released into the atmosphere which causes a public nuisance. [District Rule 4102]

California Health & Safety Code 41700 (Health Risk Assessment)

District Policy APR 1905 - Risk Management Policy for Permitting New and Modified Sources (dated 3/2/01) specifies that for an increase in emissions associated with a proposed new source or modification, the District perform an analysis to determine the possible impact to the nearest resident or worksite.

Therefore pursuant to the policy, a risk management review has been performed for this project to analyze the impact of toxic emissions. For projects where the increase in cancer risk is greater than one per million, Toxic Best Available Control Technology (T-BACT) is required.

The HRA results for this project are shown below (see the HRA Summary in Appendix B):

| | | HRA Results | | |
|------------|-----------------------|-------------------------|-------------------|---------------------|
| Unit | Acute Hazard Index | Chronic Hazard Index | Cancer Risk | T-BACT Required? |
| S-1822-2-0 | 0.108 | 0.001 | 0.16 in a million | No |

As demonstrated previously, T-BACT is not required for this project because the HRA indicates that the risk is not above the District's thresholds for triggering T-BACT requirements; therefore, compliance with the District's Risk Management Policy is expected.

District policy APR 1905 also specifies that the increase in emissions associated with a proposed new source or modification not have acute or chronic indices, or a cancer risk greater than the District's significance levels (i.e. acute and/or chronic indices greater than 1 and a cancer risk greater than 20 in a million). As outlined by the HRA Summary in Appendix B of this report, the emissions increases for this project was determined to be less than significant. Therefore, the following conditions will be listed on the ATC to ensure compliance:

- {1898} The exhaust stack shall vent vertically upward. The vertical exhaust flow shall not be impeded by a rain cap, roof overhang, or any other obstruction. [District Rule 4102]
- This engine shall be operated only for testing and maintenance of the engine, required regulatory purposes, and during emergency situation. Operation of the engine for maintenance, testing and required regulatory purposed shall not exceed 100 hours per calendar year. [District Rule 4702]

Rule 4201 Particulate Matter Concentration

Particulate matter emissions from the engine will be less than or equal to the rule limit of 0.1 grain per cubic foot of gas at dry standard conditions as shown by the following:

$$0.063 \quad \frac{g - PM_{10}}{bhp - hr} \times \frac{1g - PM}{0.96g - PM_{10}} \times \frac{1bhp - hr}{2.542.5 Btu} \times \frac{10^6 Btu}{8.578 dscf} \times \frac{0.35 Btu_{out}}{1 Btu_{in}} \times \frac{15.43 grain}{g} = 0.0162 \quad \frac{grain - PM}{dscf}$$

Since 0.0162 grain-PM/dscf is \leq to 0.1 grain per dscf, compliance with Rule 4201 is expected.

• {14} Particulate matter emissions shall not exceed 0.1 grains/dscf in concentration. [District Rule 4201]

Rule 4701 Internal Combustion Engines – Phase 1

Pursuant to Section 7.6.3.3 of District Rule 4702, as of June 1, 2006 District Rule 4701 is no longer applicable to natural gas-fired emergency standby or emergency IC engines. Therefore, this natural gas-fired emergency IC engine will comply with the requirements of District Rule 4702 and no further discussion is required.

Rule 4702 Internal Combustion Engines – Phase 2

The purpose of this rule is to limit the emissions of nitrogen oxides (NOx), carbon monoxide (CO), and volatile organic compounds (VOC) from internal combustion engines.

This rule applies to any internal combustion engine with a rated brake horsepower greater than 50 horsepower.

Pursuant to Section 4.2, except for the requirements of Sections 5.7 and 6.2.3, the requirements of this rule shall not apply to an internal combustion engine that meets the following condition:

 An emergency standby engine as defined in Section 3.0 of this rule, and provided that it is operated with a nonresettable elapsed operating time meter. In lieu of a nonresettable time meter, the owner of an emergency engine may use an alternative device, method, or technique, in determining operating time provided that the alternative is approved by the APCO. The owner of the engine shall properly maintain and operate the time meter or alternative device in accordance with the manufacturer's instructions.

Section 3.15 defines an "Emergency Standby Engine" as an internal combustion engine which operates as a temporary replacement for primary mechanical or electrical power during an unscheduled outage caused by sudden and reasonably unforeseen natural disasters or sudden and reasonably unforeseen events beyond the control of the operator. An engine shall be considered to be an emergency standby engine if it is used only for the following purposes: (1) periodic maintenance, periodic readiness testing, or readiness testing during and after repair work; (2) unscheduled outages, or to supply power while maintenance is performed or repairs are made to the primary power supply; and (3) if it is limited to operate 100 hours or less per calendar year for non-emergency purposes. An engine shall not be considered to be an emergency standby engine if it is used: (1) to reduce the demand for electrical power when normal electrical power line service has not failed, or (2) to produce power for the utility electrical distribution system, or (3) in conjunction with a voluntary utility demand reduction program or interruptible power contract.

Therefore, the emergency standby IC engine involved with this project will only have to meet the requirements of Sections 5.7 and 6.2.3 of this Rule.

Section 5.7 of this Rule requires that the owner of an emergency standby engine shall comply with the requirements specified in Section 5.7.2 through Section 5.7.5 below:

- 1) Properly operate and maintain each engine as recommended by the engine manufacturer or emission control system supplier.
- 2) Monitor the operational characteristics of each engine as recommended by the engine manufacturer or emission control system supplier.
- 3) Install and operate a nonresettable elapsed operating time meter. In lieu of installing a nonresettable time meter, the owner of an engine may use an alternative device, method, or technique, in determining operating time provided that the alternative is approved by the APCO and is allowed by Permit-to-Operate or Stationary Equipment Registration condition. The owner of the engine shall properly maintain and operate the time meter or alternative device in accordance with the manufacturer's instructions.

Therefore, the following conditions will be listed on the ATC to ensure compliance:

• {3405} This engine shall be operated and maintained in proper operating condition as recommended by the engine manufacturer or emissions control system supplier. [District Rule 4702]

- {3478} During periods of operation for maintenance, testing, and required regulatory purposes, the permittee shall monitor the operational characteristics of the engine as recommended by the manufacturer or emission control system supplier (for example: check engine fluid levels, battery, cables and connections; change engine oil and filters; replace engine coolant; and/or other operational characteristics as recommended by the manufacturer or supplier). [District Rule 4702]
- {3404} This engine shall be equipped with an operational non-resettable elapsed time meter or other APCO approved alternative. [District Rule 4702]
- {3807} An emergency situation is an unscheduled electrical power outage caused by sudden and reasonably unforeseen natural disasters or sudden and reasonably unforeseen events beyond the control of the permittee. [District Rule 4702]
- {3808} This engine shall not be used to produce power for the electrical distribution system, as part of a voluntary utility demand reduction program, or for an interruptible power contract. [District Rule 4702]

Section 6.2.3 requires that an owner claiming an exemption under Section 4.2 or Section 4.3 shall maintain annual operating records. This information shall be retained for at least five years, shall be readily available, and submitted to the APCO upon request and at the end of each calendar year in a manner and form approved by the APCO. Therefore, the following condition (previously proposed in this engineering evaluation) will be listed on the ATC to ensure compliance:

- {3496} The permittee shall maintain monthly records of emergency and non-emergency operation. Records shall include the number of hours of emergency operation, the date and number of hours of all testing and maintenance operations, the purpose of the operation (for example: load testing, weekly testing, rolling blackout, general area power outage, etc.) and records of operational characteristics monitoring. For units with automated testing systems, the operator may, as an alternative to keeping records of actual operation for testing purposes, maintain a readily accessible written record of the automated testing schedule. [District Rule 4702]
- {3497} All records shall be maintained and retained on-site for a minimum of five
 (5) years, and shall be made available for District inspection upon request.
 [District Rule 4702]

Rule 4801 Sulfur Compounds

Rule 4801 requires that sulfur compound emissions (as SO₂) shall not exceed 0.2% by volume. Using the ideal gas equation, the sulfur compound emissions are calculated as follows:

Volume SO₂ = (n x R x T) ÷ P n = moles SO₂ T (standard temperature) = 60 °F or 520 °R R (universal gas constant) = $\frac{10.73 \, \text{psi} \cdot \text{ft}^3}{\text{lb} \cdot \text{mol} \cdot \text{°R}}$

$$\frac{lb - S}{MMscf - gas} \times \frac{1 scf - gas}{1,000 Btu} \times \frac{1 MMBtu}{8,578 scf} \times \frac{1 lb - mol}{64 lb - S} \times \frac{10.73 \ psi - ft^3}{lb - mol - {}^{\circ}R} \times \frac{520 {}^{\circ}R}{14.7 \ psi} \times 1,000,000 = 1.97 \quad \text{ppmv}$$

Since 1.97 ppmv is \leq 2,000 ppmv, this engine is expected to comply with Rule 4801. Therefore, the following condition (previously proposed in this engineering evaluation) will be listed on the ATC to ensure compliance:

• {3491} This IC engine shall be fired on Public Utility Commission (PUC) regulated natural gas only. [District Rules 2201 and 4801]

California Health & Safety Code 42301.6 (School Notice)

The District has verified that this site is located within 1,000 feet of the following school:

School Name: Vista West High School Address: 7115 Rosedale Hwy

Bakersfield, CA 93308

Therefore, pursuant to California Health and Safety Code 42301.6, a school notice is required. Prior to the issuance of the ATC for this equipment, notices will be provided to the parents/guardians of all students of the affected school, and will be sent to all residents within 1,000 ft of the site.

Title 17 California Code of Regulations (CCR), Section 93115 - Airborne Toxic Control Measure (ATCM) for Stationary Compression-Ignition (CI) Engines

This regulation applies to any new or in-use stationary diesel-fueled compression ignition (CI) emergency standby engine. The engine involved with this project is fired on natural gas and is not compression ignited. Therefore, this regulation is not applicable to the engine involved with this project.

California Environmental Quality Act (CEQA)

The California Environmental Quality Act (CEQA) requires each public agency to adopt objectives, criteria, and specific procedures consistent with CEQA Statutes and the CEQA Guidelines for administering its responsibilities under CEQA, including the orderly evaluation of projects and preparation of environmental documents. The San

Joaquin Valley Unified Air Pollution Control District (District) adopted its *Environmental Review Guidelines* (ERG) in 2001.

The basic purposes of CEQA are to:

- Inform governmental decision-makers and the public about the potential, significant environmental effects of proposed activities.
- Identify the ways that environmental damage can be avoided or significantly reduced.
- Prevent significant, avoidable damage to the environment by requiring changes in projects through the use of alternatives or mitigation measures when the governmental agency finds the changes to be feasible.
- Disclose to the public the reasons why a governmental agency approved the project in the manner the agency chose if significant environmental effects are involved.

The District performed an Engineering Evaluation (this document) for the proposed project and determined that the project qualifies for ministerial approval under the District's Guideline for Expedited Application Review (GEAR). Section 21080 of the Public Resources Code exempts from the application of CEQA those projects over which a public agency exercises only ministerial approval. Therefore, the District finds that this project is exempt from the provisions of CEQA.

Indemnification Agreement/Letter of Credit Determination

According to District Policy APR 2010 (CEQA Implementation Policy), when the District is the Lead or Responsible Agency for CEQA purposes, an indemnification agreement and/or a letter of credit may be required. The decision to require an indemnity agreement and/or a letter of credit are based on a case-by-case analysis of a particular project's potential for litigation risk, which in turn may be based on a project's potential to generate public concern, its potential for significant impacts, and the project proponent's ability to pay for the costs of litigation without a letter of credit, among other factors.

As described above, the project requires only ministerial approval, and is exempt from the provisions of CEQA. As such, an Indemnification Agreement or a Letter of Credit will not be required for this project in the absence of expressed public concern.

IX. Recommendation

Pending a successful School Noticing and Public Noticing period, issue Authority to Construct S-1822-2-0 subject to the permit conditions on the attached draft Authority to Construct in Appendix D.

X. Billing Information

| Billing Schedule | | | | |
|------------------|--------------|--------------------|------------|--|
| Permit Number | Fee Schedule | Fee Description | Fee Amount | |
| S-1822-2-0 | 3020-10-A | 97.7 bhp IC engine | \$93.00 | |

- B. HRA Summary and AAQA for Public Notice
- C. QNEC Calculations
- D. Draft ATC

Appendix A BACT Guideline and BACT Analysis

San Joaquin Valley Unified Air Pollution Control District

Best Available Control Technology (BACT) Guideline 3.1.5

Last Update: November 27, 1996

Emission Unit: Emergency Gas Fired I.C. Engine - < 132 hp, Rich Burn

| Pollutant | Achieved in Practice or contained in SIP | Technologically Feasible | Alternate Basic Equipment |
|------------------|------------------------------------------|------------------------------------------------------------------|------------------------------|
| VOC | Positive crankcase ventilation (PCV) | VOC catalyst (3 way), positive crankcase ventilation (PCV) | |
| NOx | | NO _x Catalyst (3 way) | |
| со | | CO Catalyst (3 way) | |
| PM ₁₀ | Positive crankcase ventilation (PCV) | Positive crankcase ventilation (PCV) | |

^{*}This is a Summary Page for this Class of Source - Permit Specific BACT Determinations on Next Page(s)

Top Down BACT Analysis for the Emergency IC Engine(s)

Oxides of nitrogen (NOx) are generated from the high temperature combustion of the natural gas fuel. A majority of the NOx emissions are formed from the high temperature reaction of nitrogen and oxygen in the inlet air. The rest of the NOx emissions are formed from the reaction of fuel-bound nitrogen with oxygen in the inlet air.

1. BACT Analysis for NO_X Emissions:

a. Step 1 - Identify all control technologies

The SJVUAPCD BACT Clearinghouse guideline 3.1.5, 4th quarter 1996, identifies technologically feasible BACT for NO_x emissions from rich-burn emergency natural gas IC engines < 132 bhp as follows:

1) NO_x catalyst (three-way catalyst)

No achieved in practice alternatives or control alternatives identified as alternate basic equipment for this class and category of source are listed.

b. Step 2 - Eliminate technologically infeasible options

There are no technologically infeasible options to eliminate from step 1.

c. Step 3 - Rank remaining options by control effectiveness

1) NO_x catalyst (three-way catalyst)

d. Step 4 - Cost Effectiveness Analysis

This facility is classified as a small emitter, per the District's BACT Policy (dated 11/9/99) Section III.D, as facility-wide emissions are less than two tons per year of each affected pollutant. Therefore, per the District's BACT Policy (dated 11/9/99) Section IX.E.1, technologically feasible BACT and a cost effective analysis is not required.

e. Step 5 - Select BACT

There is no control technology that is cost effective for BACT for NO_x emissions from this rich-burn emergency standby natural gas IC engine < 132 bhp. The applicant has proposed to install a 97.7 bhp rich-burn emergency standby natural gas IC engine without a NO_x catalyst (three-way catalyst); therefore BACT for NO_x emissions is satisfied.

2. BACT Analysis for VOC Emissions:

Volatile organic compounds (VOC) emissions are generated from the incomplete combustion of the fuel. Some VOCs are emitted from the crankcase of the engine as a result of piston ring blow-by.

a. Step 1 - Identify all control technologies

The SJVUAPCD BACT Clearinghouse guideline 3.1.5, 4th quarter 1996, identifies achieved in practice BACT for VOC emissions from rich-burn emergency natural gas IC engines < 132 bhp as follows:

1) Positive crankcase ventilation

In addition, the SJVUAPCD BACT Clearinghouse guideline 3.1.5, 4th quarter 1996, identifies technologically feasible BACT for VOC emissions from rich-burn emergency natural gas IC engines < 132 bhp as follows:

1) VOC catalyst (three-way catalyst) and positive crankcase ventilation

b. Step 2 - Eliminate technologically infeasible options

There are no technologically infeasible options to eliminate from step 1.

c. Step 3 - Rank remaining options by control effectiveness

- 1) VOC catalyst (three-way catalyst) and positive crankcase ventilation
- 2) Positive crankcase ventilation

d. Step 4 - Cost effectiveness analysis

A cost effective analysis must be performed for all control options in the list from Step 3 in the order of their ranking to determine the cost effective option with the lowest emissions

This facility is classified as a small emitter, per the District's BACT Policy (dated 11/9/99) Section III.D, as facility-wide emissions are less than two tons per year of each affected pollutant. Therefore, per the District's BACT Policy (dated 11/9/99) Section IX.E.1, technologically feasible BACT and a cost effective analysis is not required.

The only remaining control technology alternative in the ranking list from Step 3 has been achieved in practice. Therefore, per SJVUAPCD BACT policy, the cost effectiveness analysis is not required.

e. Step 5 - Select BACT

BACT for VOC emissions from this rich-burn emergency standby natural gas IC engines < 132 bhp is positive crankcase ventilation. The applicant has proposed to install a 97.7 bhp rich-burn emergency standby natural gas IC engine with positive crankcase ventilation; therefore BACT for VOC emissions is satisfied.

Project #:

S-1183984

A. RMR SUMMARY

| RMR Summary | | | | | | | | | |
|----------------------------------------|-------------------------|--------------------------|----------------------------|-----------------------------------------|---------------------|---------------------------------|--|--|--|
| Units | Prioritization Score | Acute Hazard Index | Chronic Hazard Index | Maximum Individual Cancer Risk | T-BACT Required? | Special Permit Requirements? | | | |
| Unit 2-0 (97.7 BHP NG IC ENGINE) | 1.81 | 0.108 | 0.001 | 1.58E-07 | No | Yes | | | |
| Project Totals | 1.81 | 0.0 | 0.0 | 1.58E-07 | | | | | |
| Facility Totals | >1 | 0.0 | 0.0 | 1.58E-07 | | | | | |

Proposed Permit Requirements

To ensure that human health risks will not exceed District allowable levels; the following shall be included as requirements for:

Unit # 2-0

- 1. The exhaust stack shall vent vertically upward. The vertical exhaust flow shall not be impeded by a rain cap (flapper ok), roof overhang, or any other obstruction.
- 2. This engine shall be operated only for testing and maintenance of the engine, required regulatory purposes, and during emergency situations. Operation of the engine for maintenance, testing, and required regulatory purposes shall not exceed 100 hours per calendar year.

Criteria Pollutant Modeling Results*

| | Background Site | 1 Hour | 3 Hours | 8 Hours | 24 Hours | Annual |
|-------------------|-------------------------|-----------------|---------|-----------------|-----------------|-------------------|
| CO | Bakersfield-Muni (2016) | NA ¹ | Х | NA ¹ | Х | Х |
| NO _x | Bakersfield-Cali (2016) | NA ¹ | Х | Х | X | Pass |
| SO _x | Fresno – Garland (2016) | NA ¹ | NA¹ | Х | NA ¹ | Pass |
| PM ₁₀ | Bakersfield-Cali (2016) | Х | X | X | NA ¹ | Pass ² |
| PM _{2.5} | Bakersfield-Cali (2016) | Х | X | X | NA ¹ | Pass ³ |

^{*}Results were taken from the attached PSD spreadsheet.

III. Conclusion

The acute and chronic indices are below 1.0 and the cancer risk factor associated with the project is less than 1.0 in a million. In accordance with the District's Risk Management Policy, the project is approved without Toxic Best Available Control Technology (T-BACT).

To ensure that human health risks will not exceed District allowable levels; the permit requirements listed on page 1 of this report must be included for this proposed unit.

These conclusions are based on the data provided by the applicant and the project engineer. Therefore, this analysis is valid only as long as the proposed data and parameters do not change.

The emissions from the proposed equipment will not cause or contribute significantly to a violation of the State and National AAQS.

IV. Attachments

- A. RMR request from the project engineer
- B. Additional information from the applicant/project engineer
- C. Prioritization score w/ toxic emissions summary
- D. Facility Summary

¹The project is an intermittent source as defined in APR-1920. In accordance with APR-1920, compliance with short-term (i.e., 1-hour, 3-hour,8-hour and 24-hour) standards is not required.

²The criteria pollutants are below EPA's level of significance as found in 40 CFR Part 51.165 (b)(2).

Appendix C QNEC Calculations

Quarterly Net Emissions Change (QNEC)

The Quarterly Net Emissions Change is used to complete the emission profile screen for the District's PAS database. The QNEC shall be calculated as follows:

QNEC = PE2 - BE, where:

QNEC = Quarterly Net Emissions Change for each emissions unit, lb/qtr.

PE2 = Post Project Potential to Emit for each emissions unit, lb/qtr.

BE = Baseline Emissions (per Rule 2201) for each emissions unit, lb/qtr.

Using the values in Sections VII.C.2 and VII.C.6 in the evaluation above, PE2_{quarterly} and BE_{quarterly} can be calculated as follows:

| Quarterly Post Project Emissions | | | | | |
|----------------------------------|----------------------|---------------------------|--|--|--|
| Pollutant | PE2 Total (lb/yr) | Quarterly PE2 (lb/qtr) | | | |
| NOx | 131 | 32.8 | | | |
| SOx | 0 | 0.0 | | | |
| PM ₁₀ | 1 | 0.3 | | | |
| СО | 1,083 | 270.8 | | | |
| VOC | 26 | 6.5 | | | |

BEquarterly = BEannual ÷ 4 quarters/year

= 0 lb/year ÷ 4 qtr/year

= 0 lb/qtr (for all criteria pollutants)

Appendix D Draft ATC

ATC Conditions

- 3. {98} No air contaminant shall be released into the atmosphere which causes a public nuisance. [District Rule 4102]
- 4. {14} Particulate matter emissions shall not exceed 0.1 grains/dscf in concentration. [District Rule 4201]
- 5. {15} No air contaminant shall be discharged into the atmosphere for a period or periods aggregating more than three minutes in any one hour which is as dark as, or darker than, Ringelmann 1 or 20% opacity. [District Rule 4101]
- 6. {3404} This engine shall be equipped with an operational nonresettable elapsed time meter or other APCO approved alternative. [District Rule 4702]
- 7. {3807} An emergency situation is an unscheduled electrical power outage caused by sudden and reasonably unforeseen natural disasters or sudden and reasonably unforeseen events beyond the control of the permittee. [District Rule 4702]
- 8. {3808} This engine shall not be used to produce power for the electrical distribution system, as part of a voluntary utility demand reduction program, or for an interruptible power contract. [District Rule 4702]
- 9. {3491} This IC engine shall be fired on Public Utility Commission (PUC) regulated natural gas only. [District Rules 2201 and 4801]
- 10.{1897} This engine shall be equipped with either a positive crankcase ventilation (PCV) system which recirculates crankcase emissions into the air intake system for combustion, or a crankcase emissions control device of at least 90% control efficiency. [District Rule 2201]
- 11.{3494} This IC engine shall be fired on natural gas fuel only. [District Rule 2201]
- 12.{1898} The exhaust stack shall vent vertically upward. The vertical exhaust flow shall not be impeded by a rain cap, roof overhang, or any other obstruction. [District Rule 4102]
- 13. {3405} This engine shall be operated and maintained in proper operating condition as recommended by the engine manufacturer or emissions control system supplier.

 [District Rule 4702]
- 14. {3478} During periods of operation for maintenance, testing, and required regulatory purposes, the permittee shall monitor the operational characteristics of the engine as recommended by the manufacturer or emission control system supplier (for example: check engine fluid levels, battery, cables and connections; change engine oil and filters; replace engine coolant; and/or other operational characteristics as recommended by the manufacturer or supplier). [District Rule 4702]

- 15.{3806} This engine shall be operated only for testing and maintenance of the engine, required regulatory purposes, and during emergency situations. Operation of the engine for maintenance, testing, and required regulatory purposes shall not exceed 100 hours per calendar year. [District Rule 4702]
- 16. {3496} The permittee shall maintain monthly records of emergency and non-emergency operation. Records shall include the number of hours of emergency operation, the date and number of hours of all testing and maintenance operations, the purpose of the operation (for example: load testing, weekly testing, rolling blackout, general area power outage, etc.) and records of operational characteristics monitoring. For units with automated testing systems, the operator may, as an alternative to keeping records of actual operation for testing purposes, maintain a readily accessible written record of the automated testing schedule. [District Rule 4702]
- 17. {3497} All records shall be maintained and retained on-site for a minimum of five (5) years, and shall be made available for District inspection upon request. [District Rule 4702]
- 18. {edited 3501} Emissions from this IC engine shall not exceed any of the following limits: X.XX g-NOx/bhp-hr, X.XX g-PM10/bhp-hr, X.XX g-CO/bhp-hr, or X.XX g-VOC/bhp-hr. [District Rule 2201]

- 9. {3494} This IC engine shall be fired on natural gas fuel only. [District Rule 2201]

CONDITIONS CONTINUE ON NEXT PAGE

YOU MUST NOTIFY THE DISTRICT COMPLIANCE DIVISION AT (661) 392-5500 WHEN CONSTRUCTION IS COMPLETED AND PRIOR TO OPERATING THE EQUIPMENT OR MODIFICATIONS AUTHORIZED BY THIS AUTHORITY TO CONSTRUCT. This is NOT a PERMIT TO OPERATE. Approval or denial of a PERMIT TO OPERATE will be made after an inspection to verify that the equipment has been constructed in accordance with the approved plans, specifications and conditions of this Authority to Construct, and to determine if the equipment can be operated in compliance with all Rules and Regulations of the San Joaquin Valley Unified Air Pollution Control District. Unless construction has commenced pursuant to Rule 2050, this Authority to Construct shall expire and application shall be cancelled two years from the date of issuance. The applicant is responsible for complying with all laws, ordinances and regulations of all-ether governmental agencies which may pertain to the above equipment.

Samir Sheikh, Executive Director APCO

Arnaud Marjollet Director of Permit Services

- 10. {3478} During periods of operation for maintenance, testing, and required regulatory purposes, the permittee shall monitor the operational characteristics of the engine as recommended by the manufacturer or emission control system supplier (for example: check engine fluid levels, battery, cables and connections; change engine oil and filters; replace engine coolant; and/or other operational characteristics as recommended by the manufacturer or supplier). [District Rule 4702]
- 11. {3496} The permittee shall maintain monthly records of emergency and non-emergency operation. Records shall include the number of hours of emergency operation, the date and number of hours of all testing and maintenance operations, the purpose of the operation (for example: load testing, weekly testing, rolling blackout, general area power outage, etc.) and records of operational characteristics monitoring. For units with automated testing systems, the operator may, as an alternative to keeping records of actual operation for testing purposes, maintain a readily accessible written record of the automated testing schedule. [District Rule 4702 and 17 CCR 93115]
- 12. {3497} All records shall be maintained and retained on-site for a minimum of five (5) years, and shall be made available for District inspection upon request. [District Rule 4702]
- 13. Emissions from this IC engine shall not exceed any of the following limits: 6.1 g-NOx/bhp-hr, 0.063 g-PM10/bhp-hr,50.3 g-CO/bhp-hr, or 1.2 g-VOC/bhp-hr. [District Rule 2201]
- 14. {3807} An emergency situation is an unscheduled electrical power outage caused by sudden and reasonably unforeseen natural disasters or sudden and reasonably unforeseen events beyond the control of the permittee. [District Rule 4702 and 17 CCR 93115]
- 15. {3806} This engine shall be operated only for testing and maintenance of the engine, required regulatory purposes, and during emergency situations. Operation of the engine for maintenance, testing, and required regulatory purposes shall not exceed 100 hours per calendar year. [District Rule 4702]
- 16. {3808} This engine shall not be used to produce power for the electrical distribution system, as part of a voluntary utility demand reduction program, or for an interruptible power contract. [District Rule 4702 and 17 CCR 93115]

To: The Parents or Guardians of the Students Attending Kindergarten through 12th Grade Schools within ¼ mile of 7020 Rosedale Hwy in Bakersfield, CA (Vista West Hish School).

Residents within 1,000 Feet of 7020 Rosedale Hwy in Bakersfield, CA.

Re: Public Notification Requirement of California Health and Safety Code §42301.6

Project Number: S-1822

Project Description: S-1183984

Dear Parents/Residents:

The San Joaquin Valley Air Pollution Control District (Air District) has received an application from B&B Surplus Inc at 7020 Rosedale Hwy in Bakersfield, CA for the following project:

Existing 97.7 horsepower natural gas-fired engine to provide emergency power in the event of an electrical outage

Since this project is located within 1,000 feet of the outer bounds of a school site, the California Health & Safety Code §42301.6 requires that you be given this notification and an opportunity to comment on the project before permits are issued.

The Air District has determined that, as proposed, the installation/modification will comply with all Air District regulations. The Air District's analysis of the proposal has determined that the emissions from operation of this equipment will not pose a significant health risk to the school children or to the surrounding public.

Should you have any questions or comments about this project, please submit them in writing within 30 days of the date of this notice to the following:

San Joaquin Valley Air Pollution Control District Attn: Thomas Aguirre 34946 Flyover Court Bakersfield, CA 93308

You may also contact Thomas Aguirre at (661) 392-5613

ASUNTO: Aviso público requerido por el Código de la Salud y Seguridad de

California (Sección 42301.6) Número del proyecto: S-1822

Descripción del proyecto: S-1183984

Estimados Padres/Residentes:

El Distrito para el Control de la Contaminación del Aire del Valle de San Joaquín (Distrito del Aire) ha recibido una solicitud de B&B Surplus Inc ubicado en 7020 Rosedale Hwy en Bakersfield, CA para el siguiente proyecto:

Un motor de combustión interna de gas natural de 97.7 caballos de fuerza para apoderar un generador eléctrico durante apagones eléctricos

Como este proyecto está ubicado dentro de 1,000 pies del exterior de un sitio escolar, la sección §42301.6 del Código de la Salud y Seguridad de California requiere que se les de este aviso y la oportunidad para comentar sobre el proyecto antes de que los permisos sean otorgados.

El Distrito del Aire ha determinado que, como propuesto, la instalación cumplira con todas las regulaciones del Distrito del Aire. El analisis por el Distrito del Aire sobre el propuesto proyecto, ha determinado que las emisiones del uso del equipo no resultara en un riesgo significante a la salud de los estudiantes o del público alrededor.

Si usted tiene preguntas o comentarios sobre este proyecto, por favor sométalos por escrito dentro de 30 días de la fecha de este aviso a la siguiente dirección:

SAN JOAQUIN VALLEY APCD ATTN: Thomas Aguirre 34946 Flyover Court Bakersfield, CA 93308

CALIFORNIA HEALTH AND SAFETY CODE

CH&SC 42301.6 Permit Approval: Powers & Duties of APCO

- 42301.6 (a) Prior to approving an application for a permit to construct or modify a source which emits hazardous air emissions, which source is located within 1,000 feet from the outer boundary of a schoolsite, the air pollution control officer shall prepare a public notice in which the proposed project or modification for which the application for a permit is made is fully described. The notice may be prepared whether or not the material is or would be subject to subdivision (a) of Section 25536, if the air pollution control officer determines and the administering agency concurs that hazardous air emissions of the material may result from an air release, as defined by Section 44303. The notice may be combined with any other notice on the project or permit which is required by law.
- (b) The air pollution control officer shall, at the permit applicant's expense, distribute or mail the public notice to the parents or guardians of children enrolled in any school that is located within one-quarter mile of the source and to each address within a radius of 1,000 feet of the proposed new or modified source at least 30 days prior to the date final action on the application is to be taken by the officer. The officer shall review and consider all comments received during the 30 days after the notice is distributed, and shall include written responses to the comments in the permit application file prior to taking final action on the application.
- (1) Notwithstanding Section 49073 of the Education Code, or any other provision of law, the information necessary to mail notices required by this section shall be made available by the school district to the air pollution control officer.
- (2) Nothing in this subdivision precludes, at the discretion of the air pollution control officer and with permission of the school, the distribution of the notices to the children to be given to their parents or guardians.
- (c) Notwithstanding subdivision (b), an air pollution control officer may require the applicant to distribute the notice if the district had such a rule in effect prior to January 1, 1989.
- (d) The requirements for public notice pursuant to subdivision (b) or a district rule in effect prior to January 1, 1989, are fulfilled if the air pollution control officer or applicant responsible for giving the notice makes a good faith effort to follow the procedures prescribed by law for giving the notice, and, in these circumstances, failure of any person to receive the notice shall not affect the validity of any permit subsequently issued by the officer.
 - (e) Nothing in this section shall be deemed to limit any existing authority of any District.
- (f) An applicant for a permit shall certify whether the proposed source or modification is located within 1,000 feet of a schoolsite. Misrepresentation of this fact may result in the denial of a permit.
- (g) The notice requirements of this section shall not apply if the air pollution control officer determines that the application to construct or modify a source will result in a reduction or equivalent amount of air contaminants, as defined in Section 39013, of which are hazardous air emissions.
 - (h) As used in this section:
- (1) "Hazardous air emissions" means emissions into the ambient air of air contaminants which have been identified as a toxic air contaminant by the state board or by the air pollution control officer for the jurisdiction in which the project is located. As determined by the air pollution control officer, hazardous air emissions also mean emissions into the ambient air from any substances identified in subdivisions (a) to (f), inclusive, of Section 44321 of the Health and Safety Code.
- (i) " Acutely hazardous material" means any material defined pursuant to subdivision (a) of Section 25532.
