

INDIRECT SOURCE REVIEW PROGRAM

2025 ANNUAL REPORT

July 1, 2024 - June 30, 2025

San Joaquin Valley
AIR POLLUTION CONTROL DISTRICT

**SAN JOAQUIN VALLEY AIR POLLUTION CONTROL DISTRICT
GOVERNING BOARD 2025**

CHAIR: Amy Shuklian
Supervisor, Tulare County

VICE CHAIR: Bobby Macaulay
Supervisor, Madera County

MEMBERS:

VITO CHIESA
Supervisor, Stanislaus County

ROBERT RICKMAN
Supervisor, San Joaquin County

DAVID COUCH
Supervisor, Kern County

ALEXANDER C. SHERRIFFS, M.D.
Appointed by Governor

ROSA ESCUTIA-BRAATON
Councilmember, City of Modesto

RUSTY ROBINSON
Supervisor, Kings County

DEBORAH LEWIS
Mayor Pro Tem, City of Los Banos

JOSE RODRIGUEZ
Mayor Pro Tem, City of Madera

BUDDY MENDES
Supervisor, Fresno County

GILBERTO REYNA
Councilmember, City of Wasco

TANIA PACHECO-WERNER, PHD
Appointed by Governor

LIZ WYNN
Councilmember, City of Visalia

LLOYD PAREIRA
Supervisor, Merced County

AIR POLLUTION CONTROL OFFICER:

SAMIR SHEIKH

I. EXECUTIVE SUMMARY

This *2025 Annual Report on the District's Indirect Source Review Program* covers the reporting period from July 1, 2024, through June 30, 2025.

The District's [Indirect Source Review \(ISR\) rule](#), originally adopted in 2005, was designed to reduce the growth in nitrogen oxides (NOx) and particulate matter smaller than ten microns in aerodynamic diameter (PM10) emissions from mobile and area sources associated with the construction and operation of new industrial, commercial, residential, transit, and other non-residential development projects in the San Joaquin Valley. New development projects generate air pollution during both construction and operational phases by increasing vehicle trips and other emission-producing activities. To comply with the ISR rule and achieve the required emissions reductions, developers have the ability to identify and incorporate clean-air measures into their projects to reduce emissions at the project location and within surrounding communities.

Examples of on-site mitigation measures include the use of cleaner, newer model-year off-road construction equipment; zero- or near-zero-emission heavy duty on-road trucks and van fleets; zero- or near-zero-emission on-site equipment, development of electric vehicle charging infrastructure and solar power systems; construction of bike paths and sidewalks, and the incorporation of high-efficiency building design elements.

If on-site clean-air measures implemented by a developer do not achieve the emission reductions required under the ISR rule, the developer must pay an off-site mitigation fee to cover the remaining balance of required reductions. One hundred percent of off-site mitigation fees are used by the District to fund emission-reduction projects through its incentive grant programs. Developers also pay an administrative fee equal to four percent (4%) of the required off-site mitigation fees to cover the District's cost of administering the funded emission reduction projects.

In addition to complying with the ISR rule, a developer may further mitigate a project's air quality impacts by entering into a Voluntary Emission Reduction Agreement (VERA) with the District. Under a VERA, the developer provides funds to the District to offset the project's emission impacts in accordance with the California Environmental Quality Act (CEQA) or the National Environmental Policy Act (NEPA). These funds are used by the District to implement emission-reduction projects that achieve equivalent or greater air quality benefits. Since 2005, the District has entered into 56 VERAs.

This annual report summarizes revenues, expenditures, and emission reductions achieved through both the ISR and VERA (ISR-VERA) programs. To date, in addition to preventing over 22,323 tons of NO_x and PM₁₀ emissions through use of on-site mitigation and clean-air design measures, the District has achieved more than 21,590 tons of emission reductions through the investment of over \$189 million dollars in ISR and VERA funds in its emission reduction grant and incentive programs.

During this reporting period, the District received 351 ISR Air Impact Assessment applications and entered into four new VERAs. Total funds received under the ISR rule and VERA program were \$3,318,554 and \$1,108,187, respectively, for a combined total of \$4,426,741. Clean-air projects funded through ISR and VERA mitigation fees achieved emission reductions totaling 853 tons (634 tons of NO_x and 219 tons of PM₁₀) during this reporting period, at an average cost-effectiveness of \$10,256 per ton of emissions reduced.

II. INTRODUCTION

The San Joaquin Valley's challenges in meeting national ambient air quality standards are unmatched anywhere in the nation due to the region's unique geography, meteorology, and topography. Since 1992, the District has adopted nearly 700 rules as part of an aggressive, ongoing control strategy to reduce emissions throughout the Valley and achieve federal air quality attainment requirements, resulting in significant air quality improvements. Through these efforts, and in coordination with the California Air Resources Board's (CARB) initiatives to reduce mobile source emissions, NO_x emissions across the Valley have been reduced by more than 75%, while stationary source emissions under the District's jurisdiction have been reduced by over 94% since 1980.

While decades of coordinated efforts have delivered remarkable air quality improvements, continued population growth in the San Joaquin Valley poses an ongoing challenge to maintaining and furthering these air quality gains. According to the Population Research Unit of the California Department of Finance, the region's population is projected to increase by 13.9% between years 2020 to 2035, compared to a 7.7% increase statewide over the same period.

Population growth contributes to increased area source emissions from activities such as consumer product use, fuel combustion for heating and cooking, and landscape maintenance. In addition, vehicle miles traveled (VMT) increase with population growth, resulting in higher emissions from fuel combustion. The projected increase in these so-called “indirect source” emissions diminishes some of the progress achieved through the District’s stationary source air quality management program and state and federal mobile source programs.

Although the District cannot directly regulate mobile source tailpipe emissions, it has longstanding statutory authority to regulate indirect sources of air pollution. Exercising this authority, the District made a federally enforceable commitment to regulate indirect sources when it adopted the PM10 Attainment Plan in June 2003. In 2003, Governor Gray Davis signed Senate Bill 709 (Florez) into law, following its passage by the California Legislature. The measure was codified as Health and Safety Code Section 40604. This legislation required the District to adopt, by regulation, a schedule of fees to be assessed on area-wide or indirect sources of emissions under its jurisdiction.

The purpose of the District's ISR rule is to require developers to incorporate clean air measures that reduce emissions of NOx and PM10 from new development projects. It is important to note that particulate matter emissions from mobile sources consist predominately of fine particles (PM2.5), which are a subset of PM10. Consequently, the PM10 emission reductions achieved under the ISR rule directly result in corresponding reductions in PM2.5 emissions. In effect, increases in PM10 emissions are being offset by reductions that are primarily PM2.5, providing a positive benefit to ambient PM2.5 concentrations.

The ISR rule applies to any applicant seeking final discretionary approval for a development project, or any portions thereof, that upon full buildout will include any of the following:

- 50 or more residential units
- 2,000 square feet or more of commercial space
- 9,000 square feet or more of educational space
- 10,000 square feet or more of government space
- 20,000 square feet or more of medical or recreational space

- 25,000 square feet or more of light industrial space
- 39,000 square feet or more of general office space
- 100,000 square feet or more of heavy industrial space
- 9,000 square feet or more of space not identified above

In addition, the ISR rule applies to any applicant that seeks to gain approval from a public agency for a large development project, that upon full buildout, will include any of the following:

- 250 or more residential units
- 10,000 square feet or more of commercial space
- 45,000 square feet or more of educational space
- 50,000 square feet or more of governmental space
- 100,000 square feet or more of medical office or recreational space
- 125,000 square feet or more of light industrial space
- 195,000 square feet or more of general office space
- 500,000 square feet or more of heavy industrial space
- 45,000 of square feet or more of space not identified above

Additionally, transit or transportation development projects are subject to the ISR rule if construction exhaust emissions are projected to equal or exceed 2.0 tons of NOx or 2.0 tons of PM10.

Since the original adoption of Rule 9510 in 2005, the District has continued to coordinate with public agencies and developers throughout the San Joaquin Valley to assist and educate stakeholders on the requirements of the ISR rule. To ensure individual projects achieve and maintain compliance with Rule 9510, the District employs a variety of mechanisms and tools, including:

- Presentations and educational workshops for developers and public agencies
- Ongoing Rule 9510 Small Business Assistance for developers and public agencies
- Inclusion of Rule 9510 project information on District Dust Control Plan and Construction Notification forms
- Incorporation of ISR applicability requirements within the District's CEQA comment letters to public agencies for new development projects, ensuring project-specific awareness
- Use of CEQAnet, a searchable online database maintained by the California Office of Land Use and Climate Innovation, which contains key project information for CEQA documents submitted for review
- Use of CoSTAR, a comprehensive online real estate service containing detailed property information, allowing the District to conduct outreach and verify compliance with Rule 9510 requirements

In addition, Rule 9510 requires developers to report on clean-air measures implemented at project sites, such as the use of cleaner construction and operational fleets, to ensure full compliance with rule requirements. The District continues to enhance outreach efforts to further educate developers and public agencies about the benefits of proactive

ISR compliance and the opportunities available through the District's support programs.

This report has been prepared pursuant to provisions of Rule 9510, which require the District to provide an annual accounting of funds collected and emissions reduced through the ISR program. The report includes the following information:

- Total amount of off-site fees received
- Total funds expended
- Total funds remaining
- Any refunds issued
- A list of all projects funded
- Total emissions reductions achieved
- The overall cost-effectiveness factor for funded projects

III. IMPLEMENTATION

District Indirect Source Review Rule

During this reporting period, the District received 351 ISR applications. For historical context, the number of ISR applications received annually since the program's inception is presented in Figure 1 below.

Figure 1: Number of ISR Applications Received

Voluntary Emission Reduction Agreements

A Voluntary Emission Reduction Agreement is an air quality mitigation measure through which a developer may voluntarily enter into a contractual agreement with the District to offset a development project's air quality impacts beyond the reductions achieved through compliance with the District's ISR rule. Under a VERA, the developer provides funds to the District, which in turn identifies, funds, and administers emission reduction projects and verifies that the specified reductions have been successfully achieved.

Projects funded through VERAs have historically included the electrification of stationary internal combustion engines (such as agricultural irrigation pumps), replacement of older heavy-duty trucks with cleaner, more efficient models, and replacement of older farm tractors with newer, lower-emission equipment. Since 2005, the District has entered into 56 VERAs. Based on the District's experience, the implementation of a VERA serves as an effective mitigation measure under CEQA and NEPA, achieving the emission reductions necessary to reduce a project's air quality impacts to less-than-significant levels.

For development projects subject to the ISR rule, developers must also comply with applicable ISR requirements. Accordingly, this report includes revenues and emission reductions achieved through both the ISR and VERA programs.

During this reporting period, the District adopted the following VERAs, with the corresponding funding amounts and emissions reductions:

- Yosemite Square Subdivision – \$57,372 and 5.9 tons of emission reductions
- Tesla's Lost Hills Microgrid EV Charging Project – \$16,601 and 1.71 tons of emission reductions
- Lost Hills Treated Auto-Shredder Waste (TASW) Material Recovery Facility (MRF) Project – \$776,869 and 81 tons of emission reductions
- Lost Hills Composting Facility Project – \$3,515,665 and 366.84 tons of emission reductions

Oil and Gas Emission Reduction Agreement

In 2015, Kern County certified an Environmental Impact Report (EIR) for amendments to its zoning ordinance governing oil and gas exploration and production activities. Consistent with the EIR, Kern County and the District established the Oil and Gas Emission Reduction Agreement (OGERA) to mitigate air quality impacts from future oil and gas development in the county. Under this program, Kern County collects mitigation fees from oil and gas operators when issuing permits for new production wells and transfers those funds to the District to implement emission reduction projects through its grant and incentive programs.

In subsequent years, the EIR has been subject to multiple legal challenges under CEQA, prompting Kern County to address the deficiencies identified by the courts. However, on September 19, 2025, Governor Newsom signed Senate Bill 237 (Grayson) into law, declaring the County's EIR legally sufficient to serve as CEQA coverage for its updated

oil and gas zoning ordinance. As a result, qualifying projects approved under the ordinance no longer require additional CEQA review, and the District will collaborate with Kern County to implement the OGERA moving forward.

The reinstatement of the OGERA framework has the potential to generate substantial new funding for clean air initiatives in the San Joaquin Valley. Historically, prior to the court's invalidation of the EIR, mitigation fees collected under OGERA provided the District with over \$82 million dollars in funding to implement cost-effective emission reduction projects across a variety of sectors, including heavy-duty equipment replacement, agricultural engine electrification, and other clean-technology incentives. With the legal status of Kern County's EIR now reaffirmed under Senate Bill 237 (Grayson), future oil and gas development projects are again expected to contribute significant new resources to the District's grant and incentive programs, further advancing the Valley's progress toward attainment of federal air quality standards.

IV. FISCAL SUMMARY

During this reporting period, the District received \$3,318,554 in ISR funds and \$1,108,187 in VERA funds, for a combined total of \$4,426,741.

Figure 2: ISR and VERA Program Funds Received

As presented in Table 1 below, the District's ISR and VERA accounts held a beginning balance of \$16,473,622. During this reporting period, the District received \$4,426,741 in new funds, expended \$8,779,458 on off-site emission reduction projects, and encumbered \$5,236,358 in contracts for additional emission reduction projects. At the end of the reporting period, the combined unencumbered balance of the ISR and VERA accounts was \$6,884,547.

Table 1: ISR-VERA Fiscal Summary (July 1, 2024 - June 30, 2025)

| | ISR | VERA | Total |
|-----------------------------------|--------------------|--------------------|--------------------|
| Beginning Fund Balance | \$4,782,336 | \$11,691,286 | \$16,473,622 |
| Amount Received | \$3,318,554 | \$1,108,187 | \$4,426,741 |
| Amount Refunded | \$0 | \$0 | \$0 |
| Amount Spent (Paid Out) | -\$2,474,495 | -\$6,304,963 | -\$8,779,458 |
| Ending Fund Balance | \$5,626,395 | \$6,494,510 | \$12,120,905 |
| Encumbered Amount | -\$1,269,398 | -\$3,966,960 | -\$5,236,358 |
| Ending Unencumbered Amount | \$4,356,997 | \$2,527,550 | \$6,884,547 |

V. EMISSION REDUCTION SUMMARY

Through the District's grant and incentive programs, clean air emissions reduction projects undergo a thorough application review prior to execution of a contractual agreement between the District and the project applicant. Once a contract is executed, funds are encumbered for that specific project. Each contract remains valid for a defined period of time to allow for the purchase and installation of new equipment and submission of a reimbursement request. Upon approval of the reimbursement request, the encumbered funds are disbursed to the project applicant.

Because the implementation and reimbursement process can take several months, the timing of expenditures varies depending on the types of emission reduction projects funded. As a result, funds received during a given reporting period may be expended in either within that same reporting period or in subsequent reporting periods.

ISR and VERA Off-Site Emission Reductions Achieved

During this reporting period, the District achieved emission reductions totaling 853 tons through clean-air projects funded by ISR and VERA mitigation fees. These reductions include 634 tons of NOx and 219 tons of PM10, at an average cost-effectiveness of \$10,256 per ton of emissions reduced, as summarized in Table 2 below.

The District expended ISR and VERA funds to support 884 clean-air emission reduction projects, including the replacement of older, higher-emitting agricultural tractors with new latest-tier cleaner models and the retrofit of residential open-hearth fireplaces with certified natural gas inserts. A complete listings of all funded projects for this reporting period is provided in Appendix A.

Table 2: Off-Site Emission Reductions Achieved (July 1, 2024 - June 30, 2025)

| Program | NOx (tons) | PM ₁₀ (tons) | Total (tons) | Amount Paid Out | Cost-Effectiveness |
|--------------|------------|-------------------------|--------------|--------------------|---------------------|
| ISR | 23 | 87 | 110 | \$2,471,046 | \$22,464/ton |
| VERA | 611 | 132 | 743 | \$6,277,144 | \$8,448/ton |
| Total | 634 | 219 | 853 | \$8,748,190 | \$10,256/ton |

ISR and VERA Off-Site Emission Reductions Achieved - Historic Since 2006

As discussed above, mitigation funds collected under the ISR and VERA programs are administered through the District's grant and incentive programs to implement clean-air projects throughout the San Joaquin Valley. The District has earned recognition for excellence in the implementing these programs, with multiple state audits commending their efficiency, cost-effectiveness, and transparency.

Since inception of the ISR rule and VERA program, the District's efforts have achieved the cumulative emission reductions shown in Table 3 below.

Table 3: Off-Site Emission Reductions Achieved Since 2006

| Program | NOx (tons) | PM ₁₀ (tons) | Total (tons) |
|--------------|---------------|-------------------------|---------------|
| ISR | 5,923 | 1,840 | 7,763 |
| VERA | 12,541 | 1,285 | 13,826 |
| Total | 18,464 | 3,125 | 21,589 |

ISR Estimated Emission Reductions

Estimated emission reductions under the ISR program reflect a combination of reductions achieved through the incorporation of on-site clean-air measures during project buildout and off-site reductions achieved through the District's grant-funded mitigation projects. For this reporting period, projects assessed under ISR are estimated to achieve the combined on-site and off-site emission reductions shown in Table 4 below.

Table 4: Estimated Emission Reductions from Approved ISR Projects (July 1, 2024 - June 30, 2025)

| Source | NOx (tons) | PM ₁₀ (tons) | Total (tons) |
|------------------------------|--------------|-------------------------|--------------|
| On-site Emission Reductions | 578 | 952 | 1,530 |
| Off-site Emission Reductions | 1,438 | 1,774 | 3,212 |
| Total | 2,016 | 2,726 | 4,742 |

VI. COST-EFFECTIVENESS

Over the years, the District has had significant success achieving emission reductions under ISR, including reductions achieved through the off-site mitigation fees remitted by subject development projects. Since 2008, the ISR rule has assessed off-site mitigation fees at \$9,350 per ton of NOx and \$9,011 per ton of PM10, with these fee rates originally established based on historical incentive program performance and the cost-effectiveness levels achievable at the time.

To generate the required off-site mitigation under Rule 9510, the District relies on its suite of voluntary incentive programs, which provide the surplus NOx and PM10 emission reductions needed to fully mitigate impacts from subject development projects. The District's ability to rely on these programs to fulfill ISR mitigation obligations depends on whether the fees collected under the rule are sufficient to cover the actual cost of producing the corresponding pollutant-specific reductions.

The District has achieved strong results under the ISR program by funding a wide variety of off-site emission reduction projects through its established suite of voluntary incentive programs. These include key mobile source and area source projects such as:

- Drive Clean Rebate Program – supporting the replacement of older, higher-emitting vehicles with cleaner models
- Tractor Replacement Program – providing incentives for the replacement of agricultural equipment with the latest-tier cleaner technology
- Fireplace and Woodstove Change-out Program (formerly the Burn Cleaner Program) – incentivizing residents to replace older, high-polluting open-hearth fireplaces and wood-burning devices with cleaner-burning units or electric heat pumps

Because ISR fees are assessed per ton of NO_x and PM₁₀, they differ fundamentally from the combined cost-effectiveness metric used in statewide programs such as the Carl Moyer Program. Statewide incentive programs aggregate NO_x, ROG, and PM reductions into a single weighted value, with PM reductions assigned a weighting factor of 20. This means statewide cost-effectiveness thresholds, including the historical \$34,000 per ton average and the updated \$60,000 and \$120,000 per ton limits, do not directly represent the cost of achieving a ton of NO_x or PM₁₀ reduction under ISR. However, these statewide metrics remain important indicators of broader market and technological conditions that influence the District's actual cost to obtain surplus reductions using ISR mitigation fees.

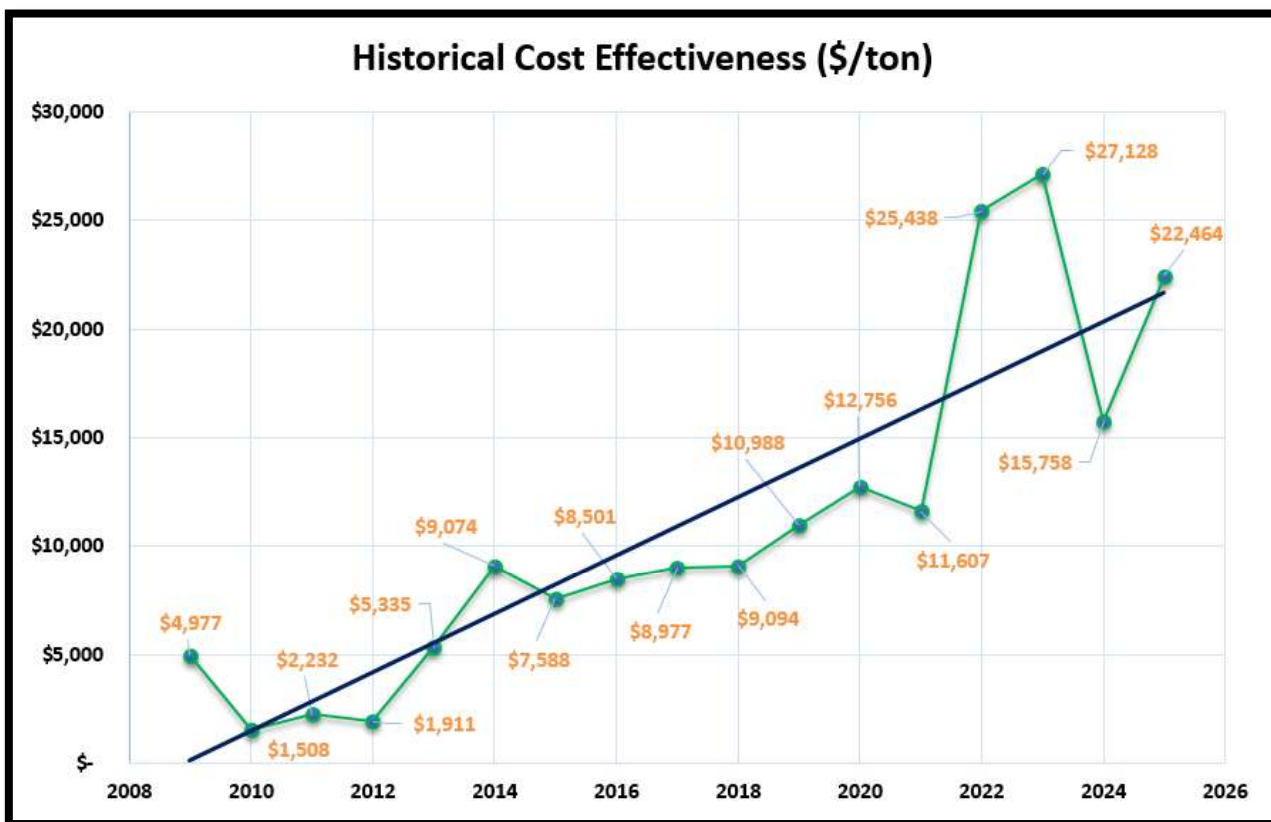

Over the past 25 years, the Carl Moyer Program has served as the benchmark for SIP-creditable incentive programs, allocating nearly \$1.6 billion statewide to clean up approximately 70,000 engines. As technology, regulatory expectations, and equipment markets have evolved, the cost of securing emission reductions through these programs has steadily increased. Senate Bill 513 (Beall) contributed to these trends by directing CARB and air districts to regularly update cost-effectiveness limits for specified project categories, including school bus replacements and emerging advanced zero emission technologies. SB 513 recognized that new and innovative technologies, particularly zero emission equipment, carry significantly higher capital costs and therefore require higher cost-effectiveness thresholds in order to remain eligible for State incentive funding. This statutory framework has contributed to the upward trajectory of allowable cost-effectiveness values across statewide programs.

In October 2024, CARB approved updates to off-road engine and equipment load factors to better represent current real world duty cycles and to align statewide emission inventory assumptions. These revisions reduced the calculated emission benefits for many project categories, which increased projected cost-effectiveness and resulted in CARB raising program thresholds to \$60,000 per ton for conventional diesel to diesel replacements and \$120,000 per ton for diesel to zero emission projects. The cost-effectiveness limit for advanced zero emission projects, such as school buses and heavy-duty trucks, remains at \$522,000 per ton, consistent with SB 513.

Although the numerical values from statewide programs cannot be directly compared to ISR's pollutant-specific fee structure, the combined effect of SB 513's statutory

requirements, CARB's annual index adjustments, and the 2024 load factor updates demonstrates a clear statewide trend. The cost of achieving surplus emission reductions has risen significantly across major incentive program categories. This same trend is reflected locally in the District's incentive programs that are relied upon for ISR mitigation. For example, cost-effectiveness for the Tractor Replacement Program, which has historically been one of the most productive sources of NOx reductions, has increased from approximately \$24,575 per ton to more than \$33,000 per ton following CARB's 2024 updates. Similar increases are evident across numerous project types, contributing to steadily rising cost-effectiveness values, as illustrated in Figure 3 below.

Figure 3: ISR Historical Cost-Effectiveness (\$/ton)

Over the history of the ISR program, the District has consistently achieved the required emission off-site reductions using the mitigation fees collected under Rule 9510. However, over the past seven years, the actual cost per ton of NOx and PM10 reduced through the District's incentive programs has exceeded the ISR mitigation fee rates currently collected under the rule. As cost-effectiveness values continue to rise, driven by higher equipment costs, statewide policy directives such as SB 513, and updates to emissions estimation methodologies, this gap is expected to continue widening.

To ensure that ISR fees collected in the future remain sufficient to achieve the required NOx and PM10 reductions and to cover the actual costs of generating those reductions, the District will take the necessary steps in the upcoming 2026 year to adjust the mitigation fee rates. Consistent with Rule 9510 requirements, process will involve at

least one public workshop and close engagement with affected stakeholders to solicit feedback prior to the APCO revising the District's mitigation fee rates.
